

FIRST THINGS FIRST

Pima North

2018 NEEDS AND ASSETS REPORT

**PIMA NORTH
REGIONAL PARTNERSHIP COUNCIL
2018
NEEDS AND ASSETS REPORT**

Prepared by
Harder and Company Community Research

Funded by
First Things First Pima North Regional Partnership Council

LETTER FROM THE CHAIR

July 31, 2017

Message from the Chair:

Since the inception of First Things First, the Pima North Regional Partnership Council has taken great pride in supporting evidence-based and evidence-informed early childhood programs that are improving outcomes for young children. Through both programmatic and other systems-building approaches, the early childhood programs and services supported by the regional council have strengthened families, improved the quality of early learning, and enhanced the health and well-being of children birth to 5 years old in our community.

This impact would not have been possible without data to guide our discussions and decisions. One of the primary sources of that data is our regional Needs and Assets report, which provides us with information about the status of families and young children in our community, identifies the needs of young children, and details the supports available to meet those needs. Along with feedback from families and early childhood stakeholders, the report helps us to prioritize the needs of young children in our area and determine how to leverage First Things First resources to improve outcomes for young children in our communities.

The Pima North Regional Council would like to thank our Needs and Assets vendor, Harder+Company Community Research, for their knowledge, expertise and analysis of the Pima North region. Their partnership has been crucial to our development of this report and to our understanding of the extensive information contained within these pages.

As we move forward, the First Things First Pima North Regional Partnership Council remains committed to helping more children in our community arrive at kindergarten prepared to be successful by funding high-quality early childhood services, collaborating with system partners to maximize resources, and continuing to build awareness across all sectors on the importance of the early years to the success of our children, our communities and our state.

Thanks to our dedicated staff, volunteers and community partners, First Things First has made significant progress toward our vision that all children in Arizona arrive at kindergarten healthy and ready to succeed.

Thank you for your continued support.

Sincerely,

Marcia Klipsch, Chair

INTRODUCTORY SUMMARY AND ACKNOWLEDGMENTS

90 percent of a child's brain develops before kindergarten and the quality of a child's early experiences impact whether their brain will develop in positive ways that promote learning. Understanding the critical role the early years play in a child's future success is crucial to our ability to foster each child's optimal development and, in turn, impact all aspects of wellbeing of our communities and our state.

This Needs and Assets Report for the Pima North Region helps us in understanding the needs of young children, the resources available to meet those needs and gaps that may exist in those resources. An overview of this information is provided in the Executive Summary and documented in further detail in the full report.

The First Things First Pima North Regional Partnership Council recognizes the importance of investing in young children and ensuring that families and caregivers have options when it comes to supporting the healthy development of young children in their care. This report provides information that will aid the Council's funding decisions, as well as our work with community partners on building a comprehensive early childhood system that best meets the needs of young children in our community.

It is our sincere hope that this information will help guide community conversations about how we can best support school readiness for all children in the Pima North region. This information may also be useful to stakeholders in our area as they work to enhance the resources available to young children and their families and as they make decisions about how best to support children birth to 5 years old in our area.

Acknowledgments:

We want to thank the Arizona Department of Economic Security and the Arizona Child Care Resource and Referral, the Arizona Department of Health Services, the Arizona Department of Education, the Census Bureau, the Arizona Department of Administration- Employment and Population Statistics, the Arizona Health Care Cost Containment System, the United Way of Tucson and Southern Arizona Great Expectations for Teachers, Children, Families and Communities and Child Parent Centers for their contributions of data for this report, and their ongoing support and partnership with First Things First on behalf of young children.

To the current and past members of the Pima North Regional Partnership Council, your vision, dedication, and passion have been instrumental in improving outcomes for young children and families within the region. Our current efforts will build upon those successes with the ultimate goal of building a comprehensive early childhood system for the betterment of young children within the region and the entire state.

Executive Summary

First Things First (FTF) is the only state agency in Arizona dedicated exclusively to investing in and enhancing the early childhood system. FTF works through regional partnership councils that partner with local communities to create a family-centered, comprehensive, collaborative, and high-quality early childhood system that supports the development, health, and early education of all Arizona children, from birth through age five.

Every two years, each regional partnership council develops a report detailing the needs and assets of the region's youngest children and their families. The intent of the report is to inform the council and the local community about the overall status of children zero to five years of age in the region, in order to support data-driven decision making around future funding and programming. Data for this report were gathered from federal and local sources, as well as provided directly to FTF by state agencies.

Overview of the FTF Pima North Region

The FTF Pima North Region occupies the northeastern corner of Pima County and is located in the southeastern portion of Arizona.¹ The Pima North Region is made up of a diverse mix of urban and rural communities in the central and northern portions of Pima County, including most of metropolitan Tucson, South Tucson, Oro Valley, and Marana.² The largest city in the region is Tucson and with a population of over 500,000 people is the second largest city in the state. The Pima North Region is also the home of the University of Arizona, Tucson.

The FTF Pima North Regional Partnership Council (Council) makes strategic investments to support the healthy development and learning of the young children in the Pima North Region. The Council's priority areas for examination in this report include the following:

- Kindergarten readiness
- Third grade reading and math performance
- Grandparents caring for grandchildren
- Professional development of early childhood education providers
- Prenatal care
- Immunizations

The following section provides a summary of the key findings for each of the eight domains of the 2018 Regional Needs and Assets report, highlighting the major data findings, needs and assets for the FTF Pima North Region, and potential considerations and opportunities for further exploration.

¹ In State Fiscal Year 2015, First Things First consolidated the former North Pima and Central Pima Regions into the current Pima North Region. This consolidation also included zip codes 85757 and 85746 shifting to Pima South and 85730 and 85748 shifting to Pima North.

² <http://www.firstthingsfirst.org/regions/Publications/FTF%20Snapshot%20-%20Pima%20North.pdf>

Key Findings

Population Characteristics

The FTF Pima North Region has a total population of 697,919 residents and 48,054 children under the age of six. Though the total number of births has decreased in recent years, the population of zero to five year olds is projected to increase over the next several decades. The race and ethnicity breakdown of the population is similar to that of the rest of the state with 66 percent of the adult population identifying as White and three quarters of the adult population identifying English as their primary language. However, almost half of the population ages zero to five (47%) and 39 percent of mothers identify as Hispanic or Latino, indicating that the demographics of the region will likely change in future years and more linguistically and culturally responsive services may be needed as the Hispanic/Latino population continues to grow.

The majority of households with children under six are married-couple households, with about 28 percent of households led by single females, which is higher than the state (24%) and 11 percent led by single males, which is similar to the state. Additionally, about 12 percent of children in the region live in the same household as a grandparent; of those children, about 54 percent are primarily cared for by a grandparent, which is similar to the state. The high percentage of children growing up in dual parent households is an asset for the region, as is the experience of children living in a multigenerational household, since this means the children likely have more permanent connections with adult role models. However, over a third of children are living in single family households, which can cause additional stressors and less time spent with parents that are the sole breadwinners for their family. Additionally, though having grandparents as primary caregivers can be an asset, it may also indicate that the child's parents are emotionally or financially unable to care for their child on their own. The high percentage of grandparents raising grandchildren in the region may indicate a higher need for resources and parenting education for grandparents who are taking on the task of raising a second generation.

Population characteristic considerations:

- Support culturally appropriate services for families.
- Discuss tactics for planning ahead for the projected slow, but steady, growth of the under six population and the needs that accompany that growth.
- Promote supports and resources that can help subsidize child care and other expenses for single parents.

Economic Circumstances

The average unemployment rates for both the state and region have decreased since 2010. The number of people in the labor force and the number of people employed have been fairly constant over the past six years. Ninety percent of parents with children under six are employed or their household partner is employed. The median annual income for all families in Pima County is \$58,113, which is \$975 less than the statewide median. However, there is a wide range: husband-wife families in the region have a median income of \$75,313 while single females have a median income of \$24,567. With the self-sufficiency standard for an adult with a young child being around \$34,000, single females in the region are likely in need of additional financial support to help their child's growth and development.

About 27 percent of children in the FTF Pima North Region live below the poverty level, similar to the state (29%). The Flowing Wells Unified District and Tucson Unified District have the highest percentages of children living in poverty. Black or African American, Hispanic/Latino, and American Indian or Alaskan Native ethnicities are more likely to live below the poverty level. The data on poverty by school districts and ethnicities may help identify geographic areas and populations to target for further intervention or support focused around increasing financial resources. Similarly, the school districts and populations with lower poverty rates may be able to identify strategies or assets within their areas that can be applied throughout the region.

More than a third of residents in the FTF Pima North Region (37%) do not have affordable housing and Pima County has a higher foreclosure rate than the state (1 in every 1,136 versus 1 in every 1,721). Additionally, 15 percent of the overall population and 25 percent of children under age 18 are food insecure in Pima County, meaning they have limited or uncertain access to adequate food. This may be partly due to the 24 percent of residents in the county with low access to grocery stores and the low rate of Supplemental Nutritional Assistance Program (SNAP)-authorized stores in the county. Though local programs providing fresh and healthy food options exist in the region, more outreach and information is needed to inform families of the resources available. Unstable housing and limited access to nutritional food can have detrimental effects on children's health and learning and is an area in need of support for the FTF Pima North Region.

Economic circumstances considerations:

- Continue to promote community awareness of nutrition programs available to young children and their families.
- Identify ways to support young children and connect families to other existing resources through FTF programming, such as preschool.
- Further investigate food insecurity rates in the region to have a better understanding of how FTF can support young children who are food insecure.

Educational Indicators

About two in five children (44%) between ages three to four are enrolled in nursery school, preschool, or kindergarten in the Pima North Region. A similar percentage of third grade students scored proficient or highly proficient on the AzMERIT English Language Arts and Math assessments (44% and 43%, respectively). The AzMERIT, which replaced AIMS in the 2014-2015 school year, is designed to assess students' critical thinking skills and their mastery of the Arizona College and Career Ready Standards established in 2010. Students who receive a proficient or highly proficient score are considered adequately prepared for success in the next grade. Though the AzMERIT test is a new assessment and comparative results are not available, the indication that less than half of the state and region's third graders are proficient in math and English Language Arts is concerning and suggests the need for further intervention in this area.

The percentage of first, second, and third graders missing ten or more days of school slightly increased between 2014 to 2015 in the FTF Pima North Region and the state. In addition, the percentage of first, second, and third graders missing ten or more days of school decreased as grade level increased. The FTF Pima North Region's high school graduation rate has decreased from 75 percent to 71 percent since

2011 and the high school dropout rate has remained at 4 percent since 2012. The majority of adults age twenty-five and older in the region (89%) have completed high school/received a GED or pursued further education past high school. A similar percentage of mothers in the region (84%) have completed high school or received their GED, which is 4 percent more than at the state level. In general, residents in the Pima North Region have completed high school or more, which contributes to the ability to get better jobs and the ability to provide for their children's needs.

Educational indicators considerations:

- Promote the benefits of completing a high school diploma.
- Consider additional research to understand the factors that are causing missed school days.
- Increase awareness of early education programs to support learning and school readiness from an early age.

Early Learning

Only 44 percent of preschool-aged children in the Pima North Region are enrolled in early childhood education programs. Workforce development is also a need in the region; early childhood professionals in the state are not well compensated, most earning minimum wage, and almost half leave the profession within five years.

Head Start and Early Head Start programs are assets in the region as children attending these programs tend to score higher in cognitive and social-emotional development than those who do not. About 3,250 children in the FTF Pima North Region and four neighboring counties are enrolled in Head Start or Early Head Start. Additionally, approximately 2,600 children in the region are enrolled in Quality First centers and homes rated between three to five stars. Given that there is only one Head Start program, serving 43 sites, an Early Head Start program, and an Early Head Start Child Care Partnership program funded by Child-Parent Centers, Inc.; shared by five counties in southern Arizona, the region may want to consider working with the federal government to bring more Head Start resources and programs into the FTF Pima North region. This is even more important when considering the high costs of child care in the region, especially relative to the area's median family income. Overall, although children in the region are eligible, only a few children are receiving subsidies and many children remain on the waitlist. This indicates that there is a need for child care subsidies in the FTF Pima North Region that is not being met.

The number of children receiving AzeIP referrals and services has increased in the region, indicating both increased need and capacity to meet the need. Additionally, the percentage of children who participate in special education while in preschool but transition out before entering kindergarten has been increasing for the region while decreasing for the state (8% versus 12% in 2014). This may be an indication that early delays are being addressed before kids reach elementary school. The most common types of disabilities for preschool children were developmental delays and speech and language impairments.

Early Learning Considerations:

- Increase parent awareness of the availability of preschool centers and homes that are part of the Quality First program.
- Voice support for the importance of subsidies in providing low income children access to early care and education.
- Consider providing incentives for quality early childhood professionals to retain their skills in the early childhood field and reduce staff turnover. Also consider monitoring the impact of the min wage increase in AZ and how this will affect the early childhood workforce.
- Consider advocating for the expansion of child care scholarships for more families in the region. Consider prioritizing Quality First scholarships for single parent households.

Child Health

Pima County has a lower ratio of population to primary healthcare providers than the state average, although the majority of residents have health insurance (86%). However, this ratio varies in different areas across Pima County. For example, the ratio of population to primary caregivers is more than double in some areas, such as Flowing Wells, Picture Rocks, Drexel Heights, and Valencia West, compared to the state and to Pima County as a whole. In the FTF Pima North Region, the percentage of mothers who received prenatal care during their first trimester increased from 2009-2012, then decreased slightly in 2013. In 2013, less than 2 percent of pregnant women did not receive prenatal care.

Only 31 percent of parents believe they can impact their child's brain during the prenatal period, indicating a lack of knowledge around the impact of prenatal care on a child's growth and development. Another risk indicator is the percentage of adults with obesity and diabetes in Pima County, which has been rising since 2004. In 2015, over half of mothers participating in WIC in the county were overweight or obese prior to pregnancy. This may be partly due to a limited access to nutritional food, as previously discussed, or the lack of recreational or fitness facilities. Additionally, only 10 percent of mothers reported drinking or smoking during pregnancy, indicating an understanding that substance use is not recommended during pregnancy. However, the percentage of births with medical risk factors (e.g. eclampsia, hypertension) and with complication in labor and delivery was on the rise between 2009 and 2013.

Families in the Pima North Region have been successful in implementing the healthy preventive practices of breastfeeding and vaccinating their children. The percentage of mothers who are participating in Women, Infants, and Children (WIC) who breastfeed their infant at least once a day has increased to 79 percent in 2015 and only three percent of children in childcare are exempt from immunizations.

Seventy-five percent of parents in the Pima North Region who responded to the Healthy Smiles Healthy Bodies Oral Health survey report regularly taking their children to dental visits. More than half (55%) of respondents in the region reported that their child had tooth decay and one third (33%) reported that their child had untreated tooth decay. This indicates a need for increased oral health education and services in the Pima North Region.

Child health considerations:

- Continue to promote healthy preventive behaviors like receiving immunizations.
- Continue to provide outreach and education regarding prenatal care, especially targeting first-time and teen mothers.
- Promote good oral health through other FTF programs, such as home visitation, and consider partnering with pediatricians to encourage oral health practices during well-child visits.
- Advocate for fluoridation in water in the communities within the FTF Pima North Region. Currently, Tucson Water does not add fluoride to the drinking water supply.

Family Support and Literacy

In 2012, 153 parents and caregivers in the FTF North Pima Region and 200 parents in the FTF Central Pima Region completed a survey administered by FTF to better understand parents' knowledge of parenting practices and child development. Though changes in parent knowledge have likely occurred since 2012, the data available showed as follows:

- 40 percent of parents in both regions understood that an infant takes in and reacts to the world right from birth;
- 52 percent of parents in the FTF North Pima Region and 53 percent in the FTF Central Pima Region understood that a baby can sense and be affected by his parents' mood;
- 81 percent of respondents in the FTF North Pima Region and 77 percent in the FTF Central Pima Region understood the first year of life impacts school performance;
- 97 percent of parents in both region understood the impact of emotional closeness on a child's intellectual development; and
- 80 percent of parents in the FTF North Pima Region and 56 percent of parents in the FTF Central Pima Region understood that children receive a greater benefit from talking to a person in the same room compared to hearing someone talk on the TV.

Compared to statewide respondents, slightly fewer respondents in both regions understood their impact on their child in the prenatal stage and that the first year of life has a major impact on school performance.

The majority of respondents in both regions correctly identified age-appropriate expectations of behavior and engaged with their child in activities such as reading, drawing, and singing six or seven days a week. These findings indicate that, though more education around the prenatal and infant stages is needed, most parents in the region are aware of their impact on their child's development and engage in behaviors to enhance their learning.

Between October 1, 2014 and September 30, 2015, Pima County had 971 substantiated cases of child abuse and neglect and 2,323 children in out-of-home placements. There is one domestic violence shelter funded by the Arizona Department of Economic Security (DES) in the county that served 367 adults and 308 children in 2015. Additionally, the number of children and female caregivers receiving behavioral health services in the region has remained fairly stable over the past few years while juvenile arrests and substance use have decreased in the county.

Family support and literacy considerations:

- Continue to educate parents on the importance of play and engaging in developmentally stimulating activities with their children daily.
- Continue to educate parents on parents' impact on their child's development, especially starting at the prenatal stage.
- Continue to offer and promote a variety of home visitation programs to families in the region. Also discuss providing a transition from home visitation programs that serve 0-3 year olds to PreK programs that service 4-5 year olds.
- Support programs that help young families or children that have been exposed to violence.
- Expand messaging and parent education on the importance of parent engagement and involvement starting prenatally.

Communication, Public Information and Awareness

Public awareness of the importance of early childhood development and health is a crucial component of efforts to build a comprehensive and effective early childhood system in Arizona. Building public awareness and support for early childhood is a foundational step that can impact individual behavior as well as the broader objectives of system building.

There is no one single communications strategy that will achieve the goal of making early childhood an issue that more Arizonans value and prioritize. Therefore, integrated strategies that complement and build on each other are key to any successful strategic communications effort. Employing a range of communications strategies to share information – from traditional broad-based tactics such as earned media to grassroots, community-based tactics such as community outreach – ensures that diverse audiences are reached more effectively wherever they are at across multiple mediums. Other communications strategies include: strategic consistent messaging, brand awareness, community awareness tactics such as distribution of collateral and sponsorship of community events, social media, and paid media which includes both traditional and digital advertising.

Since state fiscal year 2011, First Things First has led a collaborative, concerted effort to build public awareness and support across Arizona employing the integrated communications strategies. Results of these statewide efforts from SFY2011 through SFY2016 include:

- More than 2,000 formal presentations to community groups which shared information about the importance of early childhood;
- Nearly 230 tours of early childhood programs to show community members and community leaders in-person how these programs impact young children and their families;
- Training of almost 8,700 individuals in using tested, impactful early childhood messaging and how to best share that message with others;
- The placement of more than 2,400 stories about early childhood in media outlets statewide;
- Increased digital engagement through online platforms for early childhood information, with particular success in the growth of First Things First Facebook Page Likes, which grew from just 3,000 in 2012 to 124,000 in 2016.
- Statewide paid media campaigns about the importance of early childhood from FY10 through FY15 included traditional advertising such as television, radio and billboards as well as digital

marketing. These broad-based campaigns generated millions of media impressions over that time frame; for example in FY15 alone, the media campaign yielded over 40 million media impressions.

In addition, First Things First began a community engagement effort in SFY2014 to recruit, motivate and support community members to take action on behalf of young children. In the Pima Regions, 1,415 friends, 170 supporters and 72 champions were involved in the engagement program.

Communication, Public Information and Awareness Considerations:

- Continue to utilize integrated strategies to highlight the importance of early childhood development and health.
- Continue to engage community members through the community engagement program.

System Coordination Among Early Childhood Programs and Services

To gain a better understanding of the coordination and collaboration occurring among early childhood system partners within FTF regions, First Things First administered the Coordination and Collaboration Survey to system partners in October of 2016. Sixty-four respondents from Pima County participated in the survey. The majority of respondents were from family support or social service agencies (34%) or early care and education organizations (30%) and considered themselves to be participants or partners in the early childhood system in the FTF Pima North Region.

Overall, 39 percent of respondents perceived the early childhood system in the region to be well-coordinated and 53 percent considered it to be partially coordinated. Respondents felt the three areas of the system (Family Support and Literacy, Children's Health, and Professional Development) to be equally and highly (82-89%) effective in addressing the needs of young children and their families. Approximately three-quarters of respondents (74%) felt the Early Learning system effectively addresses the needs of young children and their families.

Family Support and Literacy was considered to have the highest level of collaboration (48%), followed by Professional Development (47%). Early Learning was considered to have a moderate level of collaboration (27%) while Children's Health was considered to have the lowest level of collaboration (13%).

System Coordination Considerations:

- Identify more system leaders that can guide system partners and participants towards a more coordinated and collective network that will even more efficiently serve children and families.
- Provide more cross-threading between Early Childhood areas to strengthen collaboration and coordination across the system.
- Identify successes from the Family Support and Professional Development collaboration efforts that can be applied to the other areas. Consider learning from other FTF regions that have strong collaborations to identify how they developed their system and apply them to Pima North as appropriate.

Opportunities for Further Exploration

Most of the findings provided in this report are based on secondary data sources. As the Council continues to make increasingly difficult decisions with diminishing funds, the following suggestions for further data collection and analysis may help inform those decisions in a data driven way. The Council may want to consider collecting additional information regarding the following:

- **Grandparents caring for grandchildren** to have a better understanding of whether the living situations are due to parents taking care of their elderly parents or due to parents who are unable to independently care for themselves and their children. Also gather information regarding the resources and education grandparents need to care for their young grandchildren, such as respite or parenting refreshers.
- School districts with **high third grade proficiency scores** versus those with lower scores and the factors that contribute to those results that can inform policy and practice changes within the lower-performing districts. In addition, looking at scores in relation to socioeconomic status to identify best practices.
- Children with **developmental delays and special needs** to understand the resources and human capital needed to identify, screen, and address mild to moderate delays early, before they become more severe.
- Barriers to receiving **immunizations**.
- **Professional development** strengths and areas for improvement for early childhood providers to continue to expand and improve upon professional development opportunities.
- The declining percentage of women receiving **early prenatal care** and the resulting outcomes to better understand the needs of women and families prior to, and during, pregnancy.
- Barriers to **system coordination** and potential innovative solutions.

Introduction

Family well-being is an important indicator for child success.³ Healthy families and healthy communities create a context in which young children can thrive, developing the cognitive, emotional, motor, and social skills they will need to succeed in school and life.⁴ Early childhood interventions help promote strong families and children.⁵

FTF is one of the critical partners creating a family-centered, comprehensive, collaborative, and high-quality early childhood system that supports the development, health, and early education of all Arizona children from birth through age five. FTF is intent on bolstering current child-focused systems within Arizona as a strategic way to maximize current and future resources. The Council makes strategic investments to support the healthy development and learning of the young children in the region. The council's priority areas for examination in this report include the following:

- Kindergarten readiness
- 3rd grade reading and math performance
- Grandparents caring for grandchildren
- Professional development of early childhood education providers
- Prenatal care
- Immunizations

About this Report

This is the sixth Needs and Assets report conducted on behalf of the Council. It fulfills the requirement of ARS Title 8, Chapter 13, Section 1161, to submit a biennial report to the Arizona Early Childhood Health and Development Board detailing the assets, coordination opportunities, and unmet needs of children birth through age five and their families in the region. This report is designed to provide updated information to the Council about the needs and assets in their region to help them make important programmatic and funding decisions. This report describes the current circumstances of young children and their families as it relates to unmet needs and assets for the FTF Pima North Region. The FTF Pima North Region occupies the northeastern corner of Pima County and is located in the southeastern portion of Arizona. The Pima North Region is made up of a diverse mix of urban, suburban, and rural communities in the central and northern portions of Pima County, including most of metropolitan Tucson, South Tucson, Oro Valley, and Marana.⁶

This report is organized by topic area followed by sub-topics and indicators. When available, data are presented for the state, county, region, and sub regional breakdowns as appropriate. Key data indicators are represented in this report in eight unique domains:

³ Martinez, J., Mehesy, C., & Seely, K. (2003). *What Counts : Measuring Indicators of Family Well-Being Executive Summary Report* (Vol. 8466). Denver, CO.

⁴ Knitzer, Jane. (2000). *Early childhood mental services: a policy and systems development perspective*. In J. Shonkoff & S. Meisels (Eds.), *Handbook of early childhood intervention* (pp. 416-438). New York, NY: Cambridge University Press.

⁵ Shonkoff, J., & Meisels, S. (2000). *Early Childhood Intervention: The Evolution of a Concept*. New York, NY: Cambridge University Press.

Methods

A systematic review designed to reveal the needs and assets of the Pima North Region was used to collect and summarize data for this report. Quantitative data components included a review and analysis of current and relevant secondary data describing the FTF Pima North region, Pima County, and State of Arizona. Wherever possible, data throughout the report are provided specifically for the FTF Pima North Region, and are often presented alongside data for Pima County and the State of Arizona for comparative purposes.

Secondary data was gathered to better understand demographic trends for the FTF Pima North Region. The assessment was conducted using data from state and local agencies and organizations that provide public data or that have an existing data sharing agreement with the FTF. A special request for data was made to the following state agencies by the FTF on behalf of Harder+Company Community Research: Arizona Department of Education (ADE), Arizona DES, Arizona Department of Health Services (ADHS), and the FTF itself.

Further secondary data were gathered directly from the public database. For example, demographic data included in this report were primarily gathered from the US Census and the American Survey data. Likewise, early education data were gathered from the US Children's Bureau and Office of the Administration for Children & Families. Understanding the true needs and assets of the region required extracting data from multiple data sets that often do not have similar reporting standards, definitions, or means for aggregating data. This suggests that for some indicators data were only available at the county level, small towns, or certain zip codes. Whereas for other indicators data were available at all levels. Whenever possible this report presents all data available. However, in some cases not enough data are available to make meaningful conclusions about a particular indicator within a region, city, or county. Furthermore, many agencies are collecting data independent of other public entities, which can result in duplication of data efforts, gaps in the collection of critical indicators, or differences in method of collection, unit of analysis, or geographic level. Many indicators that are of critical importance to understanding the well-being of children ages zero to five and their families are not currently collected in this region. The analysis presented in this report aims to integrate relevant data indicators from a variety of credible sources, including regional and sub-regional, and/or community-level analyses for a subset of data indicators. This report represents the most up to date representation of the needs and assets of young children and their families in the region and the interpretation of the identified strengths of the community (i.e. the assets available in the region).

In addition to systematically reviewing secondary data, key findings and data trends were synthesized and presented to the FTF Pima North Regional Council, FTF Evaluation Teams, and FTF Regional Directors, which allowed for a deeper discussion on the interpretation of the findings. Whenever possible, the rich context provided by the multiple FTF teams is incorporated throughout the report to help contextualize the findings. To further expand the meaningfulness of data trends, a brief literature review was conducted to ensure the inclusion of other relevant research studies that help explain the needs and assets of the region.

Per FTF guidelines, data related to social service and early education programming, with counts of fewer than ten, excluding counts of zero (i.e., all counts of one through nine) are suppressed. For data related to health or developmental delay, all counts of fewer than twenty-five, excluding counts of zero (i.e., all counts of one through twenty-four) are suppressed.

Limitations

This report relied primarily on secondary data. Most of the data were extracted by teams other than the evaluation team conducting the needs and assets assessment; therefore, conducting quality assurance on some data that were provided for this report was not possible.

Additionally, up to date information was not available for all indicators. For example, some of the demographic and economic indicators from the US Census are from 2010, eight years before this report is released. For other indicators, the most recent data available for the region was released in 2014, thus trends may have changed within those four years.

Another limitation impacting the findings and interpretations of findings is the targeted population included in each of the different data sources. For many domains reported, data were often only available at the county level rather than the region and data for children often included children ages zero to seventeen rather than children under six. ACS estimates are less reliable for small geographic areas or areas with smaller populations. Similarly, rural areas and non-white populations tend to be undercounted. Federal data also have similar limitations. For example, Head Start and WIC data only include a sample of the young children and families served.

There are also variations in the definitions and criteria used by each data source, making it difficult to make confident comparisons between data sources or indicators. Given these limitations, it is important to interpret key findings alongside contextual factors within the region.

1. Population Characteristics

Why it Matters

The profile of residents in a particular community informs the needs of the community and the types of services offered in the community. It is vitally important for policy and decision makers to understand the demographic profile of the communities they serve in order to make effective decisions that will positively impact the community's well-being. Timely information about the demographics of a region, such as the number of children and families, number of households, racial and ethnic composition, languages spoken, and living arrangements, can help policy makers to understand the needs of the region they serve and the services and resources that would be most culturally and geographically appropriate.

A thorough and comprehensive demographic profile allows policy makers to understand the residents of a region, the strengths they bring, and the needs and barriers they face by providing an overview of the geographic region's population dynamics, projected growth, ethnic and racial composition, languages spoken, immigration trends, and household characteristics (e.g., living arrangements for children). Understanding how the population is changing and where areas of growth will occur can allow decision makers to provide more resources in advance of that community confronting a shortage of resources and supports. Knowing where non-English speakers live and their primary languages allows for translation and interpretation services to be provided so that language barriers do not prevent these families from accessing health care and other social services they may need.

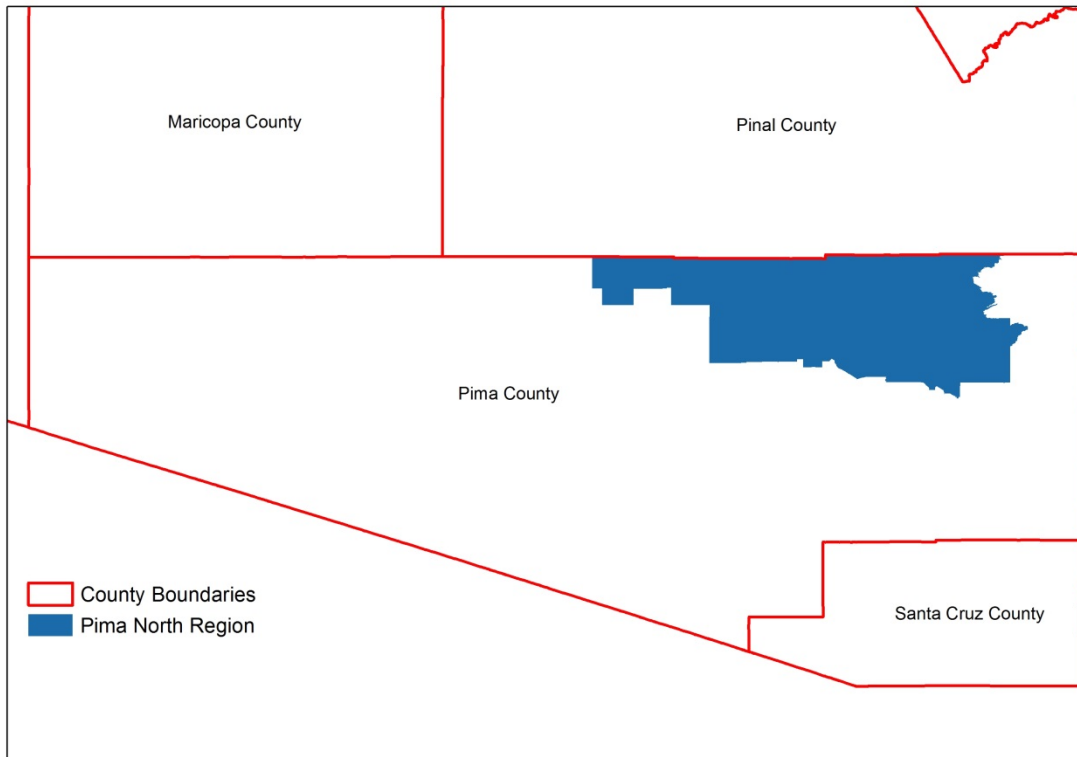

What the Data Tell Us

The FTF Pima North Region occupies the northeastern corner of Pima County, and is located in the southeastern portion of Arizona. The Pima North Region is made up of a diverse mix of urban, suburban, and rural communities in the central and northern portions of Pima County, including most of metropolitan Tucson, South Tucson, Oro Valley and Marana.⁷ The largest city in the region is Tucson, which is the second largest city in the state with a population of over 500,000 residents. The Pima North Region is also the home of the University of Arizona, Tucson.

⁷ <http://www.firstthingsfirst.org/regions/Publications/FTF%20Snapshot%20-%20Pima%20North.pdf>

Exhibit 1.1. Map of the FTF Pima North Region and Pima County

Pima North

Population Characteristics

According to the 2010 Census, the FTF Pima North Region has a total population of 697,919 residents. There are nearly 50,000 children under six years old in the region, accounting for seven percent of the total population in the region and nine percent of children ages zero to five statewide (see Exhibit 1.2). Children ages zero to five make up a slightly lower proportion in the FTF Pima North Region than in the State of Arizona and Pima County. Further age breakdowns are available in Appendix 1.1.

Exhibit 1.2. 2010 Population of Arizona, Pima County, and the FTF Pima North Region

	Arizona	Pima County	FTF Pima North Region
Total Population	6,392,017	980,263	697,919
Population of children 0-5	546,609	74,796	48,064
Percent of children 0-5 out of total population	8.6%	7.6%	6.9%

U.S. Census Bureau; 2010 Census Summary File 1; Tables P11 & P14; generated by AZ FTF; using American FactFinder; <<http://factfinder2.census.gov>>

The number of births in the FTF Pima North Region declined from 8,340 in 2009 to 7,762 in 2014 (data not shown), a seven percent decrease⁸. This compares to a six percent decrease for Arizona. Although the actual number of births has decreased in recent years, the number of births and the population of children ages zero to five in Pima County are expected to increase over the next several decades. The number of births in Pima County is projected to increase to 13,223 by 2025 (see Exhibit 1.3). Similarly, the number of children ages zero to five in the county is projected to increase over the next decade; reaching nearly eighty thousand by 2025 (see Exhibit 1.4). This indicates a growing need for early education and health services for this population in the coming years and emphasizes the importance of removing barriers and supporting family engagement and development to ensure the youngest children in the region will thrive.

Exhibit 1.3. Number of births from 2009 to 2014 and projected number of births from 2016 to 2025 in Pima County

Demographics

In the FTF Pima North Region, one-fourth of adults ages eighteen and over (25%) identify as Hispanic or Latino. This is lower than the 47 percent of children ages zero to four and 40 percent of mothers who identify as Hispanic or Latino (see Exhibit 1.5 and Exhibit 1.6). The large difference between the race/ethnicity of adults ages 18 and over and children ages zero to four indicates that the Hispanic/Latino population of the FTF Pima North Region will increase while the White population decreases, as families with young children are more likely to be Hispanic or Latino than the general population in the region.

Exhibit 1.5. Distribution of race/ethnicity in FTF Pima North Region

Exhibit 1.6. Distribution of race/ethnicity in Arizona

U.S. Census Bureau; 2010 Census Summary File 1; Table P11; generated by AZ FTF using American FactFinder; <http://factfinder2.census.gov>

Approximately three out of four people in the region (76%) speak English as their primary language, while 19 percent primarily speak Spanish and an additional five percent speak a language other than English, Spanish, or a Native North American language (see Exhibit 1.7). In addition to the 24 percent of the population that primarily speak a language other than English at home, seven percent speak English less than “very well” and four percent of households are limited English speaking households (see Exhibit 1.8).⁹ As the Hispanic/Latino population continues to grow, the cultural diversity of the region may change as well, indicating a need for more culturally responsive services.

⁹ The United States Census Bureau defines limited English speaking households as a “household in which no one 14 and over speaks English only or speaks a language other than English at home and speaks English very well.”

Exhibit 1.7. Primary language spoken at home for population ages 5 and over

Exhibit 1.8. Percentage of population that speaks English less than “very well” and percentage of linguistically isolated households

U.S. Census Bureau; 2014 American Community Survey 5-Year Estimates, Tables B16001 & B16002; generated by AZ FTF using American FactFinder; <<http://factfinder2.census.gov>>

In the FTF Pima North Region six percent of the population are not US citizens compared to eight percent in Arizona.¹⁰ Children ages zero to five in the FTF Pima North Region are also less likely to be living with foreign-born parents than children ages zero to five in Arizona (see Exhibit 1.9). In Pima County there were an estimated 1,076 migrant farmworkers and 569 seasonal farmworkers in 2008 (see Exhibit 1.10). Statewide data regarding refugee arrivals is available in Appendix 1.2.

Household Characteristics and Living Arrangements

There are almost 300,000 households in the FTF Pima North Region and 35,000 (12%) include children ages zero to five years old (see Exhibit 1.11). Although the majority of children ages zero to five live in married-couple households, nearly 40 percent of households with children ages zero to five are single-parent households and four percent of children ages zero to five in the FTF Pima North Region do not live with their parents (see Exhibit 1.12). Children that live and grow up in households with two parents have higher levels of well-being and access to more economic, social, and psychological resources than children that grow up in single-parent households.¹¹ Given the barriers that children from single-parent households face, it is important that those parents and children have services that meet their needs. Additionally, 12 percent of children ages zero to five in the region live in the same household as their grandparents. Of children ages zero to seventeen that live in the same household as a grandparent, 54 percent are primarily cared for by a grandparent, which is similar to Arizona at 53 percent.¹² There are several advantages to living in a multigenerational household, including an increase in emotional well-being and grandparents serving as role models in the socialization of children. However, this also indicates that young families may not have the resources to live on their own and may be living with their elderly parents. Grandparents raising their grandchildren may also require additional support due to the nontraditional family structure, the changes in parenting practices since grandparents were raising children, and the fact that many older adults live on fixed incomes and may struggle with caring for dependents. There may also be cultural components that lead to grandparents living in the same household as their grandchildren and being the primary caregiver.

Exhibit 1.11. Number of households and household characteristics

	Arizona % (n)	Pima County % (n)	FTF Pima North Region % (n)
Total number of households	2,380,990	388,660	292,121
Households with children 0-5	16.1% (384,441)	13.9% (53,862)	12.0% (35,013)
Married-couple households with children 0-5	65.1% (250,217)	61.7% (33,220)	60.8% (21,301)
Single-male households with children 0-5	11.3% (43,485)	11.4% (6,119)	11.5% (4,020)
Single-female households with children 0-5	23.6% (90,739)	27.0% (14,523)	27.7% (9,692)

Exhibit 1.13 displays the percentage of children living with grandparents by zip code. In two zip codes, 85634 and 85714, more than 15 percent of children are living with grandparents. An additional three zip codes, 85619, 85713, and 85641 have 10–15 percent of children living with grandparents. This information highlights some key areas within the FTF Pima North Region to provide additional support for these families.

Exhibit 1.13 Percentage of children 0-5 living with grandparents by zip code

DEMOGRAPHIC HIGHLIGHTS

The FTF Pima North Region is a mix of urban, sub-urban, and rural communities situated in northern Pima County and accounts for nearly 10 percent of the children under 6 years old in the state of Arizona. The demographic profile of the region is similar to the state of Arizona with one quarter of the population identifying as Hispanic or Latino and two-thirds as White. Over 75 percent of residents speak English as their primary language and less than 10 percent speak English less than “very well.” The majority of children ages zero to five live in a household with two parents, but 27.7 percent live in single-female households. Understanding these characteristics is important because economic, educational, health, and legal disparities occur across many population characteristics. The demographic profile of a community can be a key element used to inform decisions made by policy makers on the specific needs of young children and their families in the region.

Below are key findings that highlight the demographic needs, assets, and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
The percentage of children under age six identifying as Hispanic or Latino in the FTF Pima North Region is greater than the percentage of the total population 18 and over that identifies as Hispanic or Latino, both in the region and State. Furthermore, this population is expected to increase over the next several decades.	Support culturally appropriate services for families.
The population of children under the age of six is projected to grow at a modest and steady rate, allowing the region to foresee and prepare for the growing demands of their youngest residents.	Discuss tactics for planning ahead for the projected slow, but steady, growth of the under six population and the needs that accompany that growth.

Needs	Considerations
About 40 percent of children 0-5 live in single-parent households. Compared to two parent households, these living arrangements present additional barriers and difficulties for the parties involved..	Promote supports and resources that can help subsidize child care and other expenses for single parents.

2. Economic Circumstances

Why it Matters

The economic situation of children and their families has a large impact on their ability to live successful, independent lives as adults. Outcomes such as school achievement, physical health, and emotional well-being are all impacted by a child's economic situation as they are growing and developing.¹³ Additionally, being unemployed or living below the federal poverty level means that families have fewer resources to be able to meet their basic needs and support their child's growth and development, such as having a stable, quality home and being able to provide adequate and nutritious food.

It is critical to support young children and families by maintaining a household where children can thrive, including safe and stable housing and access to nutritious foods. Recent research has shown that housing quality, including the physical housing quality and neighborhood environment, as well as housing stability play an important role in children's development and well-being.^{14,15 16} Poor housing conditions are a strong predictor of emotional and behavioral problems and poor health outcomes.^{17 18} Housing instability, which includes frequent moves, difficulty paying rent, being evicted, or being homeless, is also associated with poor health, academic, and social outcomes.¹⁹ Children that experience housing instability demonstrate higher grade retention, higher high school dropout rates, and lower educational attainment as adults.²⁰ Thus, housing is an important component to consider when evaluating the conditions that affect a child's development and well-being during their first five years of life. Lack of access to healthy food and general food insecurity can also lead to numerous issues for children and mothers, including birth complications, delayed development, learning difficulties, and chronic health conditions.^{21 22}

What the Data Tell Us

Employment Indicators

The unemployment rate in Pima County has been declining since 2010 and was under six percent in 2015. The unemployment rate in Pima County has also been consistently lower than the unemployment rate in Arizona (see Exhibit 2.1). The number of people in the labor force and the number of people employed have been fairly constant over the past six years (see Exhibit 2.2).

Exhibit 2.1. Average unemployment rates for Arizona and Pima County

U.S. Department of Labor, Bureau of Labor Statistics (2016). Local Area Unemployment Statistics (LAUS), Arizona Office of Employment.

Exhibit 2.2. Number of people in the labor force and employed in Pima County

U.S. Department of Labor, Bureau of Labor Statistics (2016). Local Area Unemployment Statistics (LAUS), Arizona Office of Employment.

In the FTF Pima North Region approximately 90 percent of children ages zero to five live in a household where at least one adult is in the labor force (see Exhibit 2.3), which is similar to the percentage for Arizona. About two-thirds (66%) of children ages zero to five have either both parents in the labor force or a single parent in the labor force, indicating they have some need for child care. In the FTF Pima North Region the three top employers are Raytheon Missile Systems, University of Arizona, and Davis-Monthan Air Force Base, each of which employ more than 10,000 people.²³ See

Exhibit 2.3. Employment status of parents with children 0-5

U.S. Census Bureau; American Community Survey, 2014 American Community Survey Table B23008; generated by AZ FTF; using American FactFinder; <<http://factfinder2.census.gov>>.

Median Income and Poverty

The median income of all families in Pima County is \$58,113. Single-parent families with children ages zero to seventeen, which comprise over 30 percent of households with children ages zero to five, make significantly less, on average, than married-couple families. Exhibit 2.4 shows the difference in median income for married-couple families, single-female families, and single-male families.

Exhibit 2.4. Median income by type of family

U.S. Census Bureau; American Community Survey, 2014 American Community Survey 5-Year Estimates, Table B19126; generated by AZ FTF; using American FactFinder; <<http://factfinder2.census.gov>>.

According to a 2012 report published by the Center for Women’s Welfare, the annual income needed to be self-sufficient in Pima County for an adult living with an infant is \$34,758 and for an adult living with preschooler is \$38,688 (see Exhibit 2.5). The self-sufficiency standard income is nearly \$10,000 more than the median income for single-female families with children ages birth to 17. Families who are

living with fewer financial resources than needed to afford basic needs are likely to encounter several challenges that may prevent them from living a healthy life.^{24, 25} Securing affordable housing, child care, and nutritious food are likely significant barriers for these families. Living below the self-sufficiency standard negatively impacts health and well-being, including placing children ages zero to five at risk for developmental delays and low academic achievement.²⁶

Exhibit 2.5. Self-sufficiency standard for Pima County

Wage	Adult	Adult + infant	Adult + preschooler	Adult + school-age	Adult + teenager
Hourly	\$9.41	\$16.46	\$18.32	\$15.94	\$12.44
Monthly	\$1,657	\$2,897	\$3,224	\$2,806	\$2,189
Annual	\$19,878	\$34,758	\$38,688	\$33,670	\$26,272

Center for Women's Welfare (2012). *The Self-Sufficiency Standard for Arizona*. Retrieved from <http://selfsufficiencystandard.org/arizona>

The large number of single-parent families combined with their low median income contributes to a sizable portion of the population in the FTF Pima North Region living in poverty. In the FTF region 19 percent of the population and 27 percent of children ages zero to five are living in poverty (see Exhibit 2.6).

Exhibit 2.6. Percentage of the population living in poverty

U.S. Census Bureau; 2014 Small Area Income and Poverty Estimates; generated by Harder+Company Community Research; using American FactFinder; <<http://factfinder2.census.gov>>.

In the region, individuals who identify as White and individuals who identify as Asian are the only racial and ethnic groups that have a poverty rate below 20 percent. Individuals who identify as American Indian or Alaskan Native are most likely to be living in poverty (see Exhibit 2.11). Poverty rates for each racial and ethnic group in the FTF Pima North Region are similar to the State. However, American Indian or Alaskan Natives in FTF Pima North Region are less likely to be living in poverty than American Indian or Alaskan Natives in Pima County as a whole.

Exhibit 2.11. Percentage of the population below the federal poverty level by race/ethnicity

	Arizona n=	Pima County n=	FTF Pima North Region n=
Black or African-American	24.7%	24.7%	26.8%
American Indian or Alaskan Native	38.5%	42.4%	32.9%
Asian	13.7%	18.0%	19.8%
Native Hawaiian and Other Pacific Islander	27.5%	18.4%	21.7%
Other Race	29.3%	29.9%	28.8%
Two or More Races	19.9%	21.1%	23.4%

Housing and Food Insecurity

In the FTF Pima North Region, 42 percent of occupied housing units are rented and 37 percent of residents do not have affordable housing, based on the common definition of spending less than 30 percent of one’s income on housing (see Exhibit 2.12). Additionally, Town of Marana has a higher foreclosure rate than Arizona and Pima County (see Exhibit 2.13). With more than one in three residents in the region living without affordable housing and a higher foreclosure rate than the state, residents are at high risk for housing instability.²⁷

²⁷ Roy, J., Maynard, M., & Weiss, E. (2008). *The Hidden Costs of the Housing Crisis. The Partnership for America’s Economic Success.*

Exhibit 2.12. Percentage of rented housing units and residents spending 30 percent or more of income on housing

Exhibit 2.13. Residential foreclosure and pre-foreclosure rates

Location	Foreclosure and pre-foreclosure rates
Arizona	1 in every 1,721
Pima County	1 in every 1,136
- Marana City	1 in every 515
- Tucson City	1 in every 1,236

RealtyTrac (July 2016). Arizona Real Estate and Market Info. Retrieved from <http://www.realtytrac.com/statsandtrends/foreclosurestrends/az>

In Pima County 24 percent of the population has low access to grocery stores, compared to 19 percent in Arizona. Pima County has a similar number of grocery stores, fast food restaurants, SNAP-authorized stores, and WIC-authorized stores per capita in the county when compared to the state (see Exhibit 2.14). These environmental factors, combined with the poverty rate discussed above, contribute to 15 percent of the population in Pima County being food insecure, which is defined as having limited or uncertain access to adequate food. In addition, almost one quarter (25%) of children under

eighteen are food insecure, which is a slightly lower rate than Arizona (see Exhibit 2.15). Not having access to adequate or nutritious food can have serious detrimental effects upon young children including learning difficulties, delayed development, and chronic health conditions.^{28 29}

Exhibit 2.14. Food accessibility indicators

	Year	Arizona	Pima County
Percent of population with low access to grocery stores	2010	19.0%	23.7%
Grocery stores per 1,000 people	2012	0.1259	0.1219
Fast food restaurants per 1,000 people	2012	0.6467	0.6318
SNAP-authorized stores per 1,000 people	2012	0.5596	0.5911
WIC-authorized stores per 1,000 people	2012	0.1106	0.0877

Gundersen, C., A. Dewey, A. Crumbaugh, M. Kato & E. Engelhard. *Map the Meal Gap 2016: Food Insecurity and Child Food Insecurity Estimates at the County Level*. Feeding America, 2016.

There are several federal and local programs and services aimed at providing families with the food they need, including the SNAP, Temporary Assistance for Needy Families (TANF), WIC, Child and Adult Food Care Program (CACFP), Summer Food Program (SFP), and free and reduced priced lunch programs for children in schools. Information on the percentage of students eligible for free and reduced lunch programs by school can be found in Appendix 2.1.

²⁸ <http://www.feedingamerica.org/hunger-in-america/impact-of-hunger/child-hunger/child-development.html>

²⁹ Ke, Janice, and Elizabeth Lee Ford-Jones. "Food Insecurity and Hunger: A Review of the Effects on Children's Health and Behaviour." *Paediatrics & Child Health* 20.2 (2015): 89–91. Print.

Despite the prevalence of these programs, in recent years the number of children and families receiving assistance has decreased in the region (see Exhibits 2.16 and 2.17). Federal programs such as SNAP and TANF have decreased in recent years due to the expiration of benefit increases instituted during the recession.³⁰ These decreases come even as the number of families living in poverty has increased nationally.³¹

ECONOMIC HIGHLIGHTS

The unemployment rate in Pima County has been consistently lower than the state and declining over the past several years. The median income of all families in the Pima county is \$58,113, and is slightly higher than the median income statewide, which is \$59,088. Single-parent families with children ages zero to seventeen, which comprise over 30 percent of households with children ages zero to five, make significantly less, on average, than married-couple families. This contributes to the high poverty rate in the region; 27 percent of children ages zero to five in the region live in poverty. Additionally, 37 percent of households spend more than 30 percent of their income on rent and 24.8 percent of children under age eighteen in Pima County experience food insecurity. To address these needs the region has assets that serve families that may otherwise have difficulty purchasing items to meet their basic needs such as the Supplemental Nutrition Assistance Program (SNAP), Temporary Assistance for Needy Families (TANF), Women, Infants, and Children (WIC), Child and Adult Food Care Program (CACFP), and Summer Food Program (SFP).

Below are key findings that highlight the economic needs, assets, and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
The FTF Pima North Region has several programs, such as SNAP and WIC, aimed to support the availability of nutritious foods for children under six and their families.	Continue to promote community awareness of nutrition programs available to young children and their families.

Needs	Considerations
About 40 percent of children under six live in single-parent households, which earn substantially less money than dual parent households, and more than 25% of children 0-5 live in poverty.	Identify ways to support young children and connect families to other existing resources through FTF programming, such as preschool.
Over a quarter of children under eighteen in the county (25%) are food insecure and 27% live under the poverty level.	Further investigate food insecurity rates in the region to have a better understanding of how FTF can support young children who are food insecure.

3. Educational Indicators

Why it Matters

Children who participate in early care and education programs are more likely to perform better on future educational indicators (e.g., language and math proficiency). Moreover, numerous researchers in the field of early care and education have identified the first five years of life as a critical time for neurodevelopment.³² Specifically, studies have shown that exposure to early literacy skills, informal math knowledge, and certain components of socioemotional development are precursors to academic success.³³ Other educational indicators that affect positive student outcomes include, but are not limited to, school attendance, proficiency exams, grades, graduation and dropout rates, and educational attainment. Research has also demonstrated an association between high school dropout rates and poor attendance as early as kindergarten; for example, on average dropouts have missed 124 days of school by the time they reach eighth grade.³⁴ Additionally, irregular attendance has a negative effect on school budgets and could potentially lead to fewer funds for essential classroom needs.³⁵ Higher education in Arizona experienced the nation's highest decrease (47%) in state spending per student from 2008 to 2015.³⁶ Research has also shown that students dropping out high school have an increased likelihood of earning less than high school graduates, being unemployed, and receiving public assistance, and a higher chance of being incarcerated and therefore likely to confront more barriers while raising a family.³⁷

What the Data Tell Us

Student Attendance

Between 2014 and 2015, the percentage of students missing 10 or more days of school increased by between 2-3 percent across Arizona, Pima County, and the FTF Pima North Region (see Exhibit 3.1). Compared to the state, the rate of absences in Pima County and the FTF Pima North Region are slightly higher for children in grades one to three. It can also be observed that the higher the grade level, the fewer the students that are missing ten or more days of school. A list of school districts and schools included in this section can be found in Appendices 3.1 and 3.3.

Early Achievement

As council meeting members discussed, prior research indicates that pre-kindergarten enrollment can affect English Language Arts and math scores.³⁸ About four in ten children in the FTF Pima North Region (44%) who are between three to four years old are enrolled in nursery school, preschool, or kindergarten, which is slightly higher than Arizona (36%) and Pima County (39%; see Exhibit 3.2).

Exhibit 3.2. 2014 Children ages 3-4 enrolled in nursery school, preschool, or kindergarten

U.S. Census Bureau American Community Survey, 2014 American Community Survey 5-Year Estimates, Table B14003; generated by AZ FTF; using American Fact Finder; <<http://factfinder2.census.gov>>.

The AzMERIT, which replaced AIMS in the 2014-2015 school year, is designed to assess students' critical thinking skills and their mastery of the Arizona College and Career Ready Standards established in 2010. Students who receive a proficient or highly proficient score are considered adequately prepared for success in the next grade. The English Language Arts (ELA) assessment results of the AzMERIT demonstrated that about 44 percent of all third graders in the FTF Pima North Region scored "proficient" or "highly proficient", which is about four percent higher than Arizona (see Exhibit 3.3). On

³⁸ Andrews, R. J., Jaraonsky, P., & Kuhne, K. (2012). *The effects of Texas's targeted pre-kindergarten program on academic performance* (No. w18598). National Bureau of Economic Research.

the Math assessment test about 43 percent of third graders, scored “proficient” or “highly proficient”, 31 percent scored “partially proficient,” and 26 percent scored “minimally proficient” across the FTF Pima North Region and Arizona (see Exhibit 3.4). Although ELA assessment results are slightly higher than the math assessment results, overall more than half of all third graders in both the State and the region are not meeting the standard proficiency for either subject.

Exhibit 3.4. 2015 AZMerit Math Assessment results for 3rd grade students

Arizona Department of Education (2015). AzMERIT Reports. Provided by AZ FTF.

High School Graduation & Dropout Rates

Between 2011 and 2014, the 4-year high school graduation rate decreased by four percent for the FTF Pima North Region, three percent for Pima County, and two percent for Arizona (see Exhibit 3.5). In 2014, the four-year graduation rates for the FTF Pima North Region were the same as Pima County (71%) but lower than the state. During that same time period, the FTF Pima North Region, Pima County, and Arizona also saw a decrease in the five-year graduation rate.

Exhibit 3.5. 2011-2014 High school graduation rates

Arizona Department of Education (2014). Graduation Rate 2018 Cycle. Provided by AZ FTF.

**The four-year graduation rate counts a student who graduates with a regular high school diploma in four years or less as a high school graduate in his or her original cohort

From 2012-2015, the percentage of students dropping out of high school in Arizona fluctuated between 3-4 percent while the percentage of students dropping out in the FTF Pima North Region remained at a four percent dropout rate (see Exhibit 3.6).

Exhibit 3.6. 2012-2015 High school dropout rates

Arizona Department of Education (2014). Graduation Rate 2018 Cycle. Provided by AZ FTF.

Educational Attainment

The percentage of adults ages twenty-five and older who have completed more than high school is higher in the FTF Pima North Region (68%) than the state (61%) and county (65%; see Exhibit 3.7). Approximately 11 percent of adults ages twenty-five and older in the FTF Pima North Region do not have a high school education.

Exhibit 3.7. 2014 Educational attainment of adults 25 and older

U.S. Census Bureau; American Community Survey, 2014 American Community Survey; generated by AZ FTF; using American FactFinder; <<http://factfinder2.census.gov>>.

The majority of mothers in the FTF Pima North Region (61%) have completed more than high school, which is 6 percent higher than the State (55%; see Exhibit 3.8). Approximately 16 percent of mothers do not have a high school education in the FTF Pima North Region, which is 4 percent less than the statewide rate. For more information about race or ethnicity of children by school, school report-card letter grade, and/or school enrollment (by school and district), refer to Appendices 3.1-3.3

EDUCATION HIGHLIGHTS

Based on the review of education indicator data, student absences are increasing across Arizona, Pima County, and the FTF Pima North Region. A higher percentage of students in the FTF Pima North Region scored “proficient” or “highly proficient” on the on the English Language Arts (ELA) proficiency assessment (42%) and Math proficiency assessment (43%) of the AzMERIT than the state (40% and 42%, respectively). In addition, the four and five year graduation rates dropped while the rate of dropouts remained the same. It is important to address the decrease in graduation rate given that students who miss ten or more days of school have an increased probability of dropping out of school.¹⁵

Below are key findings that highlight the education needs, assets, and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
The majority of adults in the region have completed high school, received a GED or pursued further education (89%).	Promote the benefits of completing a high school diploma.

Needs	Considerations
The percentage of students in first, second or third grade missing less than ten days of school increased from 2014 to 2015.	Consider additional research to understand the factors that are causing missed school days.
Less than half of third graders are meeting proficiency requirements for English Language Arts and Math (43-44%) and less than half of preschool-aged children in the FTF Pima North Region are enrolled in early care and education (44%).	Increase awareness of early education programs to support learning and school readiness from an early age.

4. Early Learning

Why it Matters

Early Care and Education (ECE) programs encompass educational programs and strategies designed to improve future school performance for children under the age of eight.³⁹ Research suggests that the first five years of life are considered to be the most crucial stage in children's development, as they undergo the most rapid phase of growth during that period.⁴⁰ Research also shows that children's participation in high-quality early care and education environments leads to higher educational achievement later in life. Children who participate in ECE programs are better prepared for kindergarten, have greater success in elementary school, and are more likely to graduate from high school and prosper well into adulthood.^{41, 42} The quality and type of care provided to children also significantly influences the development of social and behavioral skills.⁴³

The adult to child ratio for licensed child care centers is set by the Arizona Department of Health Services (DHS) Bureau of Child Care Licensing (BCCL) and should not be exceeded. Research suggests that a smaller adult to child ratio in child care settings leads to a higher quality of interaction between a child and their caregiver, which in turn leads to better outcomes for young children.⁴⁴ On average, services that are delivered in the home have an adult to child ratio between 1:5 and 1:6.⁴⁵ However, the adult to child ratio changes for DHS Licensed Child Care Centers. State licensing requires specific adult to child ratios depending on the child's age. These requirements impact the ability of child care centers to care for children and limit the opportunities for families to access child care services. The requirements also make it difficult to track the number of vacancies and the total number of children enrolled because data can only be collected at a specific point in time to demonstrate enrollment compliance. Although it is difficult to track, understanding the number of children enrolled in early learning can help provide an estimate of the number of children who may be in need of quality early care and education.

Key indicators of early learning that help identify the needs of children include, but are not limited to, the availability of early care and education centers and homes, enrollment in ECE programs, the availability of ECE professionals, the costs of child care, the availability of child care subsidies or scholarships, and the capacity to serve special needs children. Research shows that investments in early childhood programs yield long-term benefits and can reduce crime rates, increase earnings, and encourage ongoing education.⁴⁶ In addition, the research also shows that investments in ECE have

long-term health effects and help prevent disease and promote health.

What the Data Tell Us

Early Care and Education Programs

There are 496 ECE centers and homes with a capacity of 31,505 children in the FTF Pima North Region.⁴⁷ Although the total capacity may be high, the actual facilities may not always serve the amount of children they are licensed to serve. The number of children served mainly depends on a center's ability to meet the adult to child ratio, which varies by the child's age, in order to be in compliance with licensing requirements.

As previously mentioned, 44 percent of children between the ages of three and four are enrolled in certified Early Childhood Education in the FTF Pima North Region (see Exhibit 3.2). This is lower than the percentage assumed to need child care (66%) based on household employment data (see Exhibit 2.3). Parents who do not have access to stable child care may find themselves missing work to care for their children. In addition, research has consistently demonstrated that lack of access to child care has negative effects on families and decreases parents' chances of sustaining employment.⁴⁸

Early childhood professionals are tasked with the early care and education of young children. The responsibilities of ECE professionals include guiding children (often through play and activities) and acting as their partner in the learning process. In addition, they are responsible for shaping the intellectual and social development of young children, which can have an effect on a child's future academic performance.⁴⁹ However, an ECE professional's ability to provide quality early care and education can depend on many factors including internal capacity (e.g., adequate training) and external influences (e.g., staff turnover). As previously mentioned, Arizona pays its ECE professionals one of the lowest annual salaries. This may help explain why almost half of teachers (45%) maintain their employment for less than five years. The exception is the 71 percent of Head Start teachers who stay five or more years, which is likely explained by the fact that Head Start teachers are paid the highest of all ECE providers.⁵⁰ For additional data on ECE professionals, see Appendices 4.1-4.5.

Head Start and Early Head Start

Head Start and Early Head Start are federally funded programs that promote the school readiness of children ages five and under from low income families. These programs provide comprehensive services to support child development, including early learning, health services, and family well-being and engagement. The Office of Head Start funds agencies in local communities to implement Head Start and Early Head Start programs.⁵¹ Research shows that Head Start children tend to score higher on all domains of cognitive and social-emotional development in comparison to children not enrolled

adult health. *Science*, 343(6178), 1478-1485.

⁵¹ Head Start Programs. (2016, August 15). Retrieved from <http://www.acf.hhs.gov/ohs/about/head-start>

in Head Start.⁵² In addition, Head Start children are also more likely to improve their social skills, impulse control, and approaches to learning while concurrently decreasing their problem behaviors – becoming less aggressive and hyperactive over the course of a year.⁵³

As of 2016, there is one Head Start program, an Early Head Start program, and an Early Head Start Child Care Partnership program funded by Child-Parent Centers, Inc., the Head Start grantee for five southern Arizona counties: Cochise, Pima, Graham, Greenlee and Santa Cruz Counties. There are 43 sites across all five counties and 26 sites across the Greater Tucson area. The data presented in this section are aggregated for all five of these counties.

In 2016, a cumulative total of 3,249 children enrolled in Head Start and Early Head Start in the southern Arizona counties. Of those enrolled, about 80 percent were enrolled in Head Start and 19 percent were enrolled in Early Head Start (see Exhibit 4.1). In addition, over half of children enrolled in Head Start (54%) were four year olds (see Exhibit 4.2). The lower enrollment rates of younger children are due to limited availability of Early Head Start services; the Early Head Start program was introduced much later than Head Start nationwide and also requires a higher level of funding due to costs associated with providing high quality infant and toddler care.

percent of the federal poverty level, three percent because of their status as homeless, three percent because they are recipient of public assistance, and one percent because of their status as a foster child. Those whose income exceeded 130 percent of the federal poverty line were not eligible to receive services. Although low-income families benefit from their qualification for free early education services through Head Start, there are many families that lie just outside of the qualifying income brackets yet cannot afford other quality early education programs.

Exhibit 4.3. 2015 Head Start: Type of Eligibility

Office of Head Start (2016). Head Start Data. Retrieved from <https://hses.ohs.acf.hhs.gov/pir/>

Of the children and families that were enrolled in Head Start, 52 percent reported speaking English and 46 percent reported speaking Spanish (see Exhibit 4.4). The high percentage of Spanish speakers may indicate a need for more early education services available in Spanish. For additional Head Start data for the Southern Arizona regions, such as enrollment by race/ethnicity and funded enrollment information, see Appendices 4.6 – 4.8.

Quality of Early Care and Education Programs

Quality First is a signature program of FTF that is designed to improve the quality of early learning for children birth to age 5. Quality First partners with early care and education providers across Arizona to

provide coaching and funding to improve the quality of their services. Quality First implemented a statewide standard of quality for ECE programs along with associated star ratings. These star ratings make it easier for parents to understand the rating system when deciding on care providers. The star rating ranges from one to five, attainment of quality standards begins at three stars.⁵⁴ Quality First is about continuous quality improvement. The standards are high, and reaching the quality levels is often a long-term process.

Quality First Star Rating

	Highest Quality ⁵⁵	Far exceeds quality standards
	Quality Plus	Exceeds quality standards
	Quality	Meets quality standards
	Progressing Star	Approaching quality standards
	Rising Star	Committed to quality improvement
	No Rating	Program is enrolled in Quality First but does not yet have a public rating

Arizona First Things First (October 2016). Quality First.

In the FTF Pima North Region, 2,614 children are enrolled in three to five star centers and 157 children with special needs are enrolled in three to five star centers, resulting in a total of 2,771 children who are enrolled in Quality First centers (see Exhibit 4.5). Based on the total population of children ages zero to five (see Exhibit 1.2) children enrolled in Quality First three to five star centers comprise about 6 percent of the FTF Pima North Region population and children with special needs comprise less than 1 percent of the FTF Pima North population. In sum, close to 6 percent of children are enrolled in services that meet or exceed quality standards. It is unknown whether the remainder of children have access to high quality care, or care in general. For additional data on star ratings for centers and providers, see Appendix 4.9.

Exhibit 4.5. Quality First Enrollment by Quality First Star Ratings July 2015

Arizona First Things First (July 2015). Quality First.

⁵⁴ Arizona First Things First (October 2016). Quality First.

Costs of Child Care & Access

In addition to supporting improvements in the quality of child care, FTF provides scholarships for low income children to attend quality ECE programs.

Previous research has shown that low-income mothers receiving child care subsidies, a form of financial assistance, are more likely than other low-income mothers to work, sustain employment, and work longer hours.⁴⁸ Further, the negative effects of not accessing child care include the possibility of incurring financial debt, choosing child care that is lower quality and less stable, and losing time from work. Across the state and Pima County, licensed centers have the highest cost per day and certified group homes have the second highest cost per day (see exhibit 4.6). The median cost per day of licensed centers and certified group homes in Pima County are equal to or slightly lower than the state while approved family homes in Pima County have a higher cost per day in comparison to the state. High child care prices likely place a financial strain on families who already report barely making ends meet and having difficulty affording housing and food.

Exhibit 4.6. 2014 Median cost per day of Early Childhood Care

	Arizona	District 2**
Cost for one infant Licensed Centers	\$42.00	\$39.00
Cost for one infant Approved Family Homes	\$22.00	\$25.00
Cost for one infant Certified Group Homes	\$27.00	\$25.00
Cost for one child (1-2) Licensed Centers	\$38.00	\$33.50
Cost for one child (1-2) Approved Family Homes	\$20.00	\$25.00
Cost for one child (1-2) Certified Group Homes	\$25.00	\$25.00
Cost for one child (3-5) Licensed Centers	\$33.00	\$30.00
Cost for one child (3-5) Approved Family Homes	\$20.00	\$25.00
Cost for one child (3-5) Certified Group	\$25.00	\$25.00

Arizona Department of Economic Security (2014). Child Care Market Rate Survey. Provided by AZ FTF.

**District 2 represents Pima County

Based on the median cost per day and assuming someone works 260 days per year, the median cost of child care per year for one infant in Pima County totals to approximately \$10,140 a year for licensed centers and approximately \$6,500 a year for approved family homes and certified group homes. Compared to the median income of husband-wife families in Pima County with children ages zero to seventeen (see Exhibit 2.4.), licensed centers comprise approximately 14 percent and approved family homes and certified group homes comprise nearly 9 percent of the regional median income.

The median cost per year of child care comprises an even higher amount of the median income for single-parent families with children ages zero to seventeen in Pima County and is considerably less for

single-female families compared to single-male families. Based on the median income of single-female families (see Exhibit 2.4), licensed centers make up nearly 43 percent of the median income and approved family homes and certified group homes make up almost 27 percent of the median income. High costs can be a barrier in affording quality child care, especially for single-female families.

Arizona and the FTF Pima North Region both experienced an increase in the number of children eligible for child care subsidies between 2013 and 2014 while Pima County experienced a slight decrease during the same timeframe (see Exhibits 4.7-4.9). Overall, although more children are eligible, fewer children are receiving subsidies and more children are remaining on the waitlist. This indicates that there is a need for child care subsidies in the FTF Pima North Region that is not being met

Exhibit 4.7. 2013-2014 Children eligible, receiving, and on waitlist for child care subsidies in Arizona

Developmental Delays and Special Needs

Issues in teaching young children with special needs reflect significant changes in public policy and professional philosophy across the nation. Diverse perspectives on how to effectively teach young children with developmental delays and special needs are held.⁵⁶ The Individuals with Disabilities Education Act (IDEA) is a law ensuring services to children with disabilities throughout the nation. IDEA governs how states and public agencies provide early intervention, special education, and related services to more than 6.5 million eligible infants, toddlers, children, and youth with disabilities. Infants and toddlers with disabilities (birth to age 2) and their families receive early intervention services under IDEA Part C. Children and youth (ages three to twenty-one) receive special education and related services under IDEA Part B.⁵⁷

The Arizona Early Intervention Program (AzEIP) is a statewide program that offers services and assistance to families and their children with disabilities or delays under the age of 3. The purpose of the program is to intervene at an early stage to help children develop to their highest potential.⁵⁸ Research shows that children and youth with mild intellectual disabilities are behind in academic skills compared to their peers.⁵⁹ Without proper intervention, this can lead to delays in learning to read and perform basic math and to further difficulties in other academic areas that require use of those skills. A child is eligible for AzEIP if he/she is between birth and thirty-six months of age and is developmentally delayed or has an established condition which has a high probability of resulting in a developmental delay, as defined by the State.⁶⁰

In the FTF Pima North Region, of those who received referrals to AzEIP, less than 45 percent received services in 2015 (see Exhibit 4.10. and Exhibit 4.11). However, the number receiving services increased by more than double between 2013 and 2015 for Arizona, Pima County, and the FTF Pima North Region.

⁶⁰ ADES, 2016: <https://des.az.gov/services/disabilities/early-intervention/arizona-early-intervention-program-azeip-eligibility>

To qualify for Division of Developmental Disabilities (DDD) services an individual must have a cognitive disability, cerebral palsy, autism, epilepsy, or be at risk for a developmental disability. Children under the age of six are eligible if they show significant delays in one or more of these areas of development: physical, cognitive, communication, social emotional, or self-help. Between 2012 to 2014, the number of referrals increased in Arizona, Pima County, and the FTF Pima North Region (see Exhibit 4.12). Between 2014 and 2015, the number of referrals decreased slightly for Pima County and the FTF Pima North Region. Between 2012-2015, the number of DDD services decreased slightly for Arizona, Pima County, and the FTF Pima North Region.

Exhibit 4.12. 2012-2015 Number of children receiving referrals and services from the Division of Developmental Disabilities in Arizona, Pima County, and the FTF Pima North Region

Arizona Department of Economic Security (2015). Division of Developmental Disabilities. Provided by AZ FTF.

Although the number of referrals has increased over time, the number of services is decreasing. Appendices 4.10 and 4.11. shows a breakdown and unduplicated count of children ages zero to two and children ages three to five receiving services and visits.

ADE Special Education

The Arizona Department of Education collects information on special education pre-k children who entered kindergarten without the need for an individualized education plan (IEP). The percentage of students who participated in preschool special education but no longer required special education in kindergarten decreased for both the state and FTF Pima North Region between 2012 and 2014 (see Exhibit 4.13).

Exhibit 4.13. Percentage of students transitioning out of special education between preschool and kindergarten

Arizona Department of Education (2015). Special Education. Provided by AZ FTF.

Between 2012 to 2014, the total number of preschool children identified with developmental disabilities decreased for Arizona, Pima County, and the FTF Pima North Region (see Exhibit 4.14). The most common types of disabilities for preschool children were developmental delays and speech/language impairments. For further information on types of disabilities, see Appendices 4.12 – 4.15.

Exhibit 4.14. Total number of preschool children with disabilities*

Arizona Department of Education (2015). Special Education. Provided by AZ FTF.

Note: The data presented in this table are unduplicated (i.e., children diagnosed with multiple disabilities are counted only one time in the Federal Primary Need [FPN] category).

EARLY LEARNING HIGHLIGHTS

About 44 percent of preschool-aged children are enrolled in ECE programs, which is less than the 66 percent assumed to need child care based on their parents' employment status. A contributing factor may be the high cost of child care. Compared to the median income of husband-wife families in Pima County with children 0-17, licensed centers comprise approximately 14 percent and approved family homes and certified group homes comprise nearly 9 percent of the Pima County median income. With respect to child care subsidies, more children are eligible but less are receiving subsidies and more are remaining on the waitlist. Based on the median income of single-female families in Pima County, licensed centers make up nearly 43 percent of the median income and approved family homes and certified group homes make up almost 27 percent of the median income.

The Arizona Early Intervention Program (AzEIP) is a statewide program that offers services and assistance to families and their children with disabilities or delays under the age of 3. A child is eligible for AzEIP if he/she is between birth and thirty-six months of age and is developmentally delayed or has an established condition which has a high probability of resulting in a developmental delay, as defined by the State. AzEIP referrals and services are increasing for the region.

To qualify for Division of Developmental Disabilities (DDD) services an individual must have a cognitive disability, cerebral palsy, autism, epilepsy, or be at risk for a developmental disability. Between 2012 to 2014, the number of DDD referrals increased in Arizona, Pima County, and the FTF Pima North Region. Between 2014 and 2015, the number of referrals decreased slightly for Pima County and the FTF Pima North Region. Between 2012-2015, the number of DDD services decreased slightly for Arizona, Pima County, and the FTF Pima North Region.

In addition, data from the Arizona Department of Education shows that the percentage of students who transitioned from special education while in preschool to mainstream kindergarten decreased slightly between 2012 and 2014. The number of preschoolers identified with disabilities is slightly decreasing in the region and the most common disabilities are developmental delays and speech/language impairments.

Below are key findings that highlight the early learning needs and assets in the community, and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
Quality First has been increasing the quality of child care programs in the region.	Increase parent awareness of the availability of preschool centers and homes that are part of the Quality First program.

Needs	Considerations
Between 2013 and 2014, the number of child care subsidies provided in the region decreased from 4,269 to 4,093.	Voice support for the importance of subsidies in providing low income children access to early care and education.
Less than half of Early Childhood Education professionals in the state remain in their position for over five years.	Consider providing incentives for quality early childhood professionals to retain their skills in the early childhood field and reduce staff turnover. Also consider monitoring the impact of the min wage increase in AZ and how this will affect the early childhood workforce.
Childcare costs make up 9-13% of family incomes and between 26 -41% of single female family incomes.	Consider advocating for the expansion of child care scholarships for more families in the region. Consider prioritizing Quality First scholarships for single parent households.

5. Child Health

Why it Matters

Ensuring healthy development through early identification and treatment of children's health issues helps prepare children for school.⁶¹ In addition, helping families understand healthy developmental pathways and proactive prevention ensures that children are healthy, which in turn supports children's school readiness. There are many health factors that impact the well-being of children ages zero to five and their families. The availability of resources and services for families is one key factor that contributes to their overall health. For example, during prenatal care visits, expecting mothers are provided with information and resources to promote a healthy pregnancy and increase the healthy development of their child. These visits also assist in the identification and early intervention of any potential problems. At a routine prenatal visit, physicians often remind expectant mothers of the importance of abstaining from substance use, maintaining a healthy diet, and the benefits of breastfeeding. Discussing risky health behaviors can be very important since they may influence a baby's development. For example, being overweight during pregnancy has been associated with many negative health consequences such as miscarriages, pre-term birth, low-birth weight, birth defects, lower IQ, hypertension, diabetes, and developmental delays.⁶²

Engaging in healthy preventive practices, such as breastfeeding and vaccinating children during early childhood, may help protect children from negative health outcomes and developmental delays. Breastfeeding provides children with the nutrition and protection against infections they need early in life.⁶³ Children who have not been vaccinated are at a higher risk of contracting diseases and tend to have more health issues later in life. Research has found that it is important for children to receive their immunizations early on in life because children under the age of five are at the highest risk of contracting severe illnesses since their bodies have not yet built a strong immune system.⁶⁴ Another factor that may impact health outcomes that may be deemed less important by parents is early oral health. According to the Center for Disease Control and Prevention (CDC), tooth decay is one of the most chronic diseases in children.⁶⁵ Tooth decay can cause infections that can spread to multiple teeth and may affect a child's growth. Fortunately, tooth decay is also one of the most preventable diseases in children.

Healthy People 2020 (HP 2020) set ten-year national objectives for improving the health of all Americans. Healthy People established these benchmarks to encourage collaborations across communities and sectors, empower individuals toward making informed health decisions and to measure the impact of prevention activities.⁶⁶ When appropriate, these benchmarks will be presented throughout this chapter as comparison points for certain indicators.

What the Data Tell Us

Access to Health Services

Lack of access to affordable health care is a major impediment to receiving proper care and a problem that disproportionately affects women living in poverty, placing their children at risk for health issues even before they are born, and perpetuating health disparities.⁶⁷ Consequently, lack of medical attention negatively impacts a child's ability to grow and thrive. As the FTF Pima North Region contains both an urban and rural areas, some residents may have limited transportation and be geographically isolated from a health service provider. Additionally, lack of affordable health coverage poses an additional challenge for community members to overcome. Such barriers are exacerbated by the lack of financial resources that are needed to travel from remote areas to places where providers are located.⁶⁸

Overall, Pima County has a lower ratio of population to providers compared to the state. However, this ratio varies in different areas across Pima County. The ratio of population to primary caregivers in areas such as Flowing Wells, Picture Rocks, Drexel Heights, and Valencia West is more than double that of the state and Pima County as a whole (see Exhibit 5.1). Additionally, in 2014, nine percent of children ages zero to five in the FTF Pima North Region reported not having any health insurance (see Exhibit 5.2). Though lower than the state rate and other age groups, this could potentially place children at risk for long term health complications if they fall ill but their parents do not have the sufficient funds to seek care. The HP 2020 target is for 100 percent of Americans to have medical insurance by 2020.⁶⁹

Exhibit 5.3. Parents satisfied with the community information and resources available about children’s development and health

Arizona First Things First (2012). Family and Community Survey.

Despite challenges such as traveling long distances to receive health care, most families in the FTF North Pima Region (87 %) and the FTF Central Pima Region (84%) take their children to regular doctor visits.⁷⁰ To better understand parents’ and families’ perceptions and knowledge of the services available to them and their children in their community, the FTF conducted a survey in 2012 asking parents about their satisfaction with and perception of these programs. When asked about the perception of services available in the region, the majority of parents in the FTF North Pima Region (84%) and the FTF Central Pima Region (80%) reported being very or somewhat satisfied with the resources available to help their child’s healthy development (see Exhibit 5.3). Overall, although the physician to resident ratio is not great, people overcome challenges to get regular care they are happy with.

⁷⁰ Arizona First Things First (2012). Family and Community Survey.

Prenatal Care

Research suggests that the lack of prenatal care is associated with many negative health issues for both the mother and the child.⁷¹ Research also shows that children of mothers who did not obtain prenatal care were three times more likely to have a low birth weight and five times more likely to experience fatal outcomes than those born to mothers who did receive prenatal care.⁷² In addition, studies show that women who are at the highest risk of not receiving prenatal care are mothers younger than 19 years old.⁷³ Educational attainment has also been associated with mothers receiving prenatal care, such that the higher a mother's educational attainment, the more likely they are to seek prenatal care.⁷⁴ It is important that mothers seek and receive prenatal care at an early stage in their pregnancy so physicians can treat and prevent any health issues that may occur.⁷⁵

Exhibit 5.4. Percentage of women who began prenatal care in first trimester

Exhibit 5.5. Percentage of women who did not receive any prenatal care

Arizona Department of Health Services (2014). Vital Statistics. Provided by AZ FTF.

HP 2020 aims to bring the proportion of pregnant women receiving prenatal care in the first trimester to 77.9 percent.⁷⁶ In the FTF Pima North Region, the percentage of mothers who received prenatal care during their first trimester increased from 2009-2012, then decreased slightly in 2013 (see Exhibit 5.4). In 2013, 1.8 percent of women did not receive prenatal care (see Exhibit 5.5). In addition, only 31 percent of parents in the North Pima Region and 35 percent of parents in the Central Pima Region reported that

31% of parents believed they could impact their child's brain during the prenatal period.

⁷⁵ Womens Health (n.d.). Prenatal care fact sheet. Retrieved from <https://www.womenshealth.gov/publications/our-publications/fact-sheet/prenatal-care.html#b>

⁷⁶ Healthy People 2020. About Health People Retrieved from <https://www.healthypeople.gov/2020/About-Healthy-People>

they believed they could impact their child's brain during the prenatal period.⁷⁷ This may indicate a lack of knowledge of the influence of health care, the quality of health care, and the effect of early parental engagement on a child's growth and development. There is also a need for continued outreach and education about the importance of prenatal care to reach the 30 percent of women who did not start prenatal care in the first trimester. Additional information regarding health access is provided in Appendices 5.1-5.10.

In 2014, a new version of the birth certificate introduced major changes in the way prenatal care by trimester is assessed. The month when prenatal care began is no longer directly reported but rather calculated using the date of last menstrual period and the date of the first prenatal care visit. Due to this structural change prenatal care is not comparable between 2013 and 2014 onward.

Despite the lower rate of prenatal care in 2013, over 90 percent of mothers in the FTF Pima North region reported not drinking or smoking during their pregnancy.⁷⁸ However, from 2010 to 2014, the number of babies born with drug withdrawal syndrome doubled in Pima County.⁷⁹

In 2013 over **90%** of mothers reported not drinking or smoking during pregnancy

In 2014, **110 babies** were born with drug withdrawal syndrome in Pima County

In the FTF Pima North Region, the percentage of births with medical risks and births with complications of labor and delivery steadily increased from 2009-2013 (see Exhibit 5.6 and Exhibit 5.7, respectively). Additionally, the percentage of newborns who were admitted to the Intensive Care Unit slightly increased from 2012-2014 (see Exhibit 5.8). By contrast, the percentage of babies born with abnormal conditions decreased from 2010-2012 (see Exhibit 5.9). In 2014 in the FTF Pima North Region, the percentage of births with medical risks (18.2%), percentage of births with complications (26.4%), and the percentage of babies born with abnormal conditions (5.4%) decreased significantly compared to 2013.⁸⁰ This drop is likely due to changes in data collection and definitions as a result of a new birth certificate beginning in 2014, as the 2014 definition of medical risks did not include cardiac disease, lung disease, and other medical conditions that were previously included; similar changes were made to the definitions related to births with complications and abnormal conditions.

Additional factors that place mothers at-risk of not receiving prenatal care, such as teen pregnancies, unwed mothers and mothers with low education levels, have decreased. In the FTF Pima North Region, the percentage of teen mothers decreased from 2009-2014 and is lower than the state (see Exhibit 5.10). As previously reported in 2014, 40 percent of mothers in the region had a high school education

or less (see Exhibit 3.7). However, the percentage of mothers who are not married remained stable from 2009 to 2014, but was slightly higher than the state in 2014.⁸¹ (Additional information regarding prenatal care is provided in Appendices 5.11- 5.14).

Exhibit 5.10. Percentage of mothers who are 19 years old or younger

Obesity

Obesity has been a concern in the U.S. due to associated health outcomes, such as higher risk for diabetes, cancer, and heart disease.⁸² Diabetes has also been associated with many negative health complications such as blindness, kidney failure, and amputation of limbs.⁸³

According to the College of Obstetricians and Gynecologists (ACOG), mothers who are obese during pregnancy are at risk of developing gestational diabetes, preeclampsia, and sleep apnea.⁸⁴ According to the CDC, diabetes and obesity can be prevented by increasing physical activity and maintaining a healthy diet.⁸⁵ HP 2020 aims to reduce the percentage of adults and children/adolescents who are obese to 30.5 percent and 14.5 percent, respectively.⁸⁶ In Pima County, the percentage of obese adults has increased from 18 percent to 24 percent between the years 2004–2013 (see Exhibit 5.11). Within the same timeframe, the percentage of adults with diabetes increased from 6 percent to 9 percent (see Exhibit 5.11).

Exhibit 5.12. Percentage of mother's participating in WIC overweight and obese pre-pregnancy

Arizona Department of Health Services (2015). Women, Infants & Children (WIC). Provided by AZ FTF.

In the FTF Pima North Region and the state as a whole, over 50 percent of mothers participating in WIC reported being overweight or obese pre-pregnancy (see Exhibit 5.12). As previously described in chapter one, almost 24 percent of the population in the Pima County has low access to grocery stores (see Exhibit 1.24). Furthermore, there are very few recreation and fitness facilities, parks, and outdoor use facilities where residents of Pima County can stay active.⁸⁷ The combination of having few grocery stores and places where residents can engage in physical activity may contribute to the increasing rate of obesity and diabetes in Pima County. With a high percentage of obese adults and mothers participating in WIC, it is important to continue to focus efforts on obesity prevention and ensuring adults and children in the region have access to healthy food and places to be active. Additional information regarding obesity is provided in Appendices 5.15-5.17.

Engaging in Healthy Behaviors

The American Academy of Pediatrics recommends that mothers breastfeed for the first six months after giving birth. Breast milk has antibodies that prevent babies from getting ill and has been shown to

⁸⁷ United States Department of Agriculture and Economic Research Service (2012). Food Environment Atlas.

decrease the likelihood of babies becoming obese.⁸⁸

Exhibit 5.13. Percentage of mothers participating in WIC who breastfed their infant on average at least once a day

Arizona Department of Health Services (2015). Women, Infants & Children (WIC). Provided by AZ FTF

HP 2020 aims to increase the proportion of infants who are breastfed at six months to 60.6 percent.⁸⁹ In the FTF Pima North Region, the percentage of mothers participating in WIC who breastfed their infant on average at least once per day has increased from 2012-2015. In 2015, this percentage was 7 percent higher than the state (see Exhibit 5.13).

Exhibit 5.14. Percentage of children in child care and kindergarten that have been exempt from receiving immunizations

Immunization Data Reports (2015). Provided by AZ FTF.

Vaccinations can protect children from measles, mumps, and whooping cough, which are all severe illnesses and potentially fatal to young children⁹⁰. Being vaccinated is not only a protective factor to oneself, but to the community's immunity.⁹¹

⁹¹ U.S Department of Health and Human Services (2016). Community Immunity. Retrieved from

In the FTF Pima North Region, the percentage of children in childcare or kindergarten who are exempt from immunizations for religious or medical reasons was lower than the state (see Exhibit 5.14). Compared to the state, the FTF Pima North Region has a slightly higher percentage of children in childcare who received Hib, DTaP, MMR, Hep B, and varicella vaccines (see Exhibit 5.15). This may be due to the provision of immunizations at local schools, which allows easy access to the vaccinations without requiring lengthy travel or health insurance. Additional information regarding engaging in healthy behaviors is provided in Appendix 5.18.

Exhibit 5.15. Percentage of children in childcare who have received immunizations by type of immunization

Oral Health

Severe forms of tooth decay can have negative effects on a child's speech and jaw development, may cause malnourishment and anemia, and may lead to life-threatening infections.^{92,93} Fortunately, tooth decay has also been found to be one of the most preventable diseases. It can be prevented by using fluoridated water, brushing and flossing teeth, taking a child to see a dentist regularly starting by the age of one, and getting mothers to practice good oral health care during pregnancy.

Of the parents who have AHCCCS insurance in Arizona, **22%** reported that their child(ren) do not have dental insurance.

75% of parents indicated their child(ren) regularly visited the same dental provider

The *Healthy Smiles Healthy Bodies Survey* was designed to obtain information on the prevalence and severity of tooth decay among Arizona's kindergarten children.⁹⁴ In addition, the survey collected information on behavioral and demographic characteristics associated with this condition. *Healthy Smiles Healthy Bodies* included the following primary components – (1) a dental screening and (2) an optional parent/caregiver questionnaire. During the 2014-2015 school year, *Healthy Smiles Healthy Bodies* collected information from children at eighty-four non-reservation district and charter schools throughout Arizona.⁹⁵ A total of 3,630 kindergarten children in Arizona received a dental screening. In the FTF Pima North region, 289 children received a dental screening.

Sampling

Healthy Smiles Healthy Bodies sampled children in kindergarten and third grade. District and charter elementary schools with at least 20 children in kindergarten were included in the sampling frame. The following were excluded from the sampling frame: (1) alternative, detention, and state schools for the deaf and the blind plus (2) schools located in tribal communities (based on the Arizona Department of Health Services list of tribal communities). To ensure a representative sample from every county and FTF region, the sampling frame was initially stratified by county. Where a county included more than one FTF region (Maricopa and Pima), the sampling frame was further stratified by FTF region. This resulted in 21 sampling strata; 13 county-level strata, two FTF strata within Pima County, and six FTF strata within Maricopa County. Within each stratum, schools were ordered by their National School Lunch Program (NSLP) participation rate. A systematic probability proportional to size sampling scheme was used to select a sample of five schools per stratum.⁹⁶ Three counties (Apache, Greenlee,

⁹² National Children's Oral Health Foundation (2015). *Facts About Tooth Decay*. Retrieved from <http://www.ncohf.org/resources/tooth-decay-facts/>

⁹³ Raising Children Network. (n.d.). *Tooth decay*. Retrieved from http://raisingchildren.net.au/articles/tooth_decay.html

⁹⁴ Using another funding source, ADHS expanded data collection to include 3rd grade children but that information is not included in this report.

⁹⁵ The sampling frame for the survey included all non-reservation public and charter schools with 20 or more children in kindergarten and/or 3rd grade. The following were excluded from the sampling frame; (1) special schools such as alternative, detention and special education schools plus (2) schools located in tribal communities (based on ADHS list of tribal communities) as additional approvals needed to be in place prior to participation.

⁹⁶ Probability proportional to size sampling: a sampling technique where the probability that a particular school will be chosen in the sample is proportional (corresponds) to the enrollment size (# of children) of the school

and La Paz) had fewer than five schools in the sampling frame. For these counties, all schools in the sampling frame were asked to participate. If a selected school did not have kindergarten or third grade, the appropriate feeder school was added to the sample. A systematic sampling scheme was used to select ninety-nine schools. Of these, five did not have kindergarten or third grade so five feeder schools were added to the sample resulting in 104 schools representing ninety-nine sampling intervals, of which eighty-four agreed to participate.

Survey Limitations

Although the original sample was representative of the state, not all schools participated, which may bias the results. The percentage of children eligible for the NSLP was 58 percent for schools in the sampling frame but was 72 percent for schools that participated, suggesting that lower income schools were more likely to participate. Given that lower income children have more disease; this survey may overestimate the prevalence of disease in the non-tribal communities in the state. Another limitation was the exclusion of tribal communities resulting in small sample sizes for the American Indian/Alaska Native population.

The parent/caregiver questionnaire was optional and was returned for only 44 percent (N=1,583) of the children screened. Because of this, information obtained from the questionnaire may not be representative of the state. In addition, the information was self-reported and may be affected by both recall and social desirability bias. Because of small sample sizes, caution should be taken when interpreting results at the regional and county level.

In the FTF Pima North Region, many residents have AHCCCS insurance which includes dental coverage (82%), which is higher than the state (76%).⁹⁷ Three in four respondents to the *Healthy Smiles Healthy Bodies* survey in the FTF Pima North region (75%) reported that they regularly take their children to dental visits.⁹⁸ However, more than 50 percent of children screened through the *Healthy Smiles Healthy Bodies* survey in the FTF Pima North Region suffer from tooth decay (see Exhibit 5.16) and, in 2014, about half of the residents living in Arizona did not have access to public water systems that were fluoridated⁹⁹. This indicates there continues to be a need for oral health services for children in the FTF Pima North Region. Additional information regarding oral health is provided in Appendix 5.19.

Arizona First Things First (2016). Oral Health Report.

HEALTH INDICATOR HIGHLIGHTS

In the FTF Pima North Region, there are efforts to improve certain health indicators (e.g., teen pregnancy), yet there are multiple needs for several health factors (e.g., access to prenatal care). Providing outreach and education to families regarding health services in the FTF Pima North Region is a viable start. Families need to learn about the importance of prenatal care and the danger of substance abuse during pregnancy. The community in the FTF Pima North Region needs help maintaining a healthy lifestyle to mitigate the increasing rates of obesity and diabetes. Increasing the amount of grocery stores and fitness or recreation areas may encourage the community to make healthier decisions. Lastly, although many residents reported taking their children to see a doctor regularly, there is a lack of primary care providers in the county. This may cause a hardship for residents who do not have reliable transportation to access health services, thus decreasing the number of people who go to visit a physician. Seventy-five percent of parents who responded to the Healthy Smiles Healthy Bodies survey in the FTF Pima North Region reported that they regularly take their children to dental visits. However, more than 50 percent of respondents indicated that their child suffers from tooth decay and 33 percent had untreated decay.

Below are key data trends that highlight the health needs and assets and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
Approximately 90% of children in the region are receiving immunizations.	Continue to promote healthy preventive behaviors like receiving immunizations.
Needs	Considerations
Almost three fourths of parents (69%) are unaware of the impact they have on their child's development during the prenatal stage.	Continue to provide outreach and education regarding prenatal care, especially targeting first-time and teen mothers.
More than half of children (55%) were reported to have experienced tooth decay and 33% of children had untreated tooth decay.	Promote good oral health through other FTF programs, such as home visitation, and consider partnering with pediatricians to encourage oral health practices during well-child visits.
More than 50 percent of children screened through the <i>Healthy Smiles Healthy Bodies</i> survey in the FTF Pima North Region suffer from tooth decay.	Advocate for fluoridation in water in the communities within the FTF Pima North Region. Currently, Tucson Water does not add fluoride to the drinking water supply.

6. Family Support and Literacy

Why it Matters

The first five years of life have a significant impact on children’s intellectual, social, and emotional development and research shows that parents have a profound impact on their child’s development during this time period.¹⁰⁰ Support for young families is an essential piece of the holistic efforts around kindergarten readiness and long term success for children. FTF supports families through Evidence-based home visitation and parenting education programs and through parent outreach and awareness programs. Parenting education and support to improve parenting practices can reduce stressors and lead to enriched child development and reduction of removals of children from their homes.

Given the importance of the first years of life on children’s development and the role that parents can play, it is crucial that parents understand their child’s needs and use effective parenting techniques while raising their child. Gaining more knowledge about parenting and child development allows parents to improve their parenting practices and provide their children with the experiences they need to succeed in kindergarten and beyond.¹⁰¹

Furthermore, the adverse effects of the trauma of children being removed from their parents and placed in foster care are well-documented. Early abuse and neglect have been shown to affect neurodevelopment and psychosocial development and potentially impact long term mental, medical, and social outcomes.¹⁰² Children exposed to domestic violence or who are the victims of abuse or neglect are also at increased risk to experience depression and anxiety and are more disposed to physical aggression and behavior problems.¹⁰³ Understanding the impact of trauma has led to identifying opportunities to both prevent and mitigate the adverse effects through family support services like home visitation and parent education, as well as prioritizing out-of-home placements with family members or foster families before congregate care. Given the negative outcomes associated with children who enter the system or are exposed to trauma or violence at a young age, it is important to understand the prevalence of these experiences in the FTF Pima North region to provide the necessary support to children and their families.

What the Data Tell Us

Family Caregiver Survey 2012 Survey Methodology

The Family and Community Survey was designed to measure many critical areas of parent knowledge, skills, and behaviors related to their young children. The survey contained over sixty questions, some of which were drawn from the national survey, *What Grown-Ups Understand About Child Development*.¹⁰⁴ Survey items explored multiple facets of parenting. The FTF Family and Community Survey had six major areas of inquiry:

¹⁰⁰ Center for the Study of Social Policy (2013). *Knowledge of Parenting and Child Development*. Retrieved from http://www.cssp.org/reform/strengthening-families/2013/SF_Knowledge-of-Parenting-and-Child-Development.pdf

¹⁰¹ Center for the Study of Social Policy (2013). *Knowledge of Parenting and Child Development*. Retrieved from http://www.cssp.org/reform/strengthening-families/2013/SF_Knowledge-of-Parenting-and-Child-Development.pdf

¹⁰² Putnam, F. (2006). *The impact of trauma on child development*. *Juvenile and Family Court Journal*, 57 (1) 1-11.

¹⁰³ Evans, S. E., Davies, C., & DiLillo, D. (2008). *Exposure to domestic violence: A meta-analysis of child and adolescent outcomes*. *Aggression and violent behavior*, 13(2), 131-140.

¹⁰⁴ CIVITAS Initiative, ZERO TO THREE, and BRIO Corporation, Researched by DYG, Inc. 2000. *What Grown-ups Understand About Child*

A total of 3,708 parents with children under six (FTF's target population) responded to the 2012 survey. The majority of respondents (83%) were the child's parent. The remaining respondents were grandparents (13%) or other relatives (4%). In the FTF North Pima Region, 153 parents participated in the survey. In the FTF Central Pima Region, 200 parents participated in the survey. In State Fiscal Year 2015, First Things First consolidated the former North Pima and Central Pima Regions into the current Pima North Region. This consolidation also included zip codes 85757 and 85746 shifting to Pima South and 85730 and 85748 shifting to Pima North.

The sample data were weighted so that the sample would match the population of the state on four characteristics: Family income, Educational attainment, Sex, and Race-ethnicity. Data was weighted at both the statewide level to arrive at the Arizona results and at the regional level to arrive at the regional results. Please note that regional estimates are necessarily less precise than the state estimates; i.e. small differences observed might easily be due to sampling variability.

As discussed in the Health section, 31 percent of parents in the FTF North Pima Region and 35 percent of parents in the FTF Central Pima Region understand they can significantly impact their child's brain development prenatally, compared to 32 percent of parents statewide. Similarly, survey results also show that 40 percent of parents in both regions understand that an infant can take in and react to the world around them right from birth, compared to 35 percent in Arizona. In addition, 52 percent of parents in the FTF North Pima Region and 53 percent of parents in the FTF Central Pima Region understand that a baby can sense whether or not his parent is depressed or angry, and can be affected by his parents' mood from birth to one month. In contrast, 81 percent of parents in the FTF North Pima Region and 77 percent of parents in the FTF Central Pima Region understand that the first year of life has a major impact on school performance, which is lower than statewide.¹⁰⁵ This indicates that, while most parents may understand the importance of child development, survey results indicate that not all parents are aware of the stages of development and the impact they have on their child, beginning prenatally.

Development: A National Benchmark Survey. Online, INTERNET, 06/20/02.
http://www.civitasinitiative.com/html/read/surveypdf/survey_public.htm

¹⁰⁵ Arizona First Things First (2012). Family and Community Survey.

31% of parents in the FTF North Pima Region and **35%** of parents in the FTF Central Pima Region understand that they can significantly impact their child's brain development in the prenatal stage.

40% of parents in the FTF North Pima Region and the FTF Central Pima Region understand that an infant or young child can really take in and react to the world around them right from birth, which is **5%** higher than Arizona.

52% of parents in the FTF North Pima Region and **53%** of parents in the FTF Central Pima Region understand that a baby can sense whether or not his parent is depressed or angry, and can be affected by his parents' mood from birth to one month, both of which are slightly higher than Arizona.

81% of parents in the FTF North Pima Region and **77%** of parents in the FTF Central Pima Region understand that the first year of life has a major impact on school performance, both of which are lower than Arizona.

Over three-quarters of parents in the state of Arizona (77%) and the FTF North Pima Region (85%) understand that a child's capacity for learning is not set from birth and can be increased or decreased by parental interaction, compared to 62 percent in the FTF Central Pima Region. Survey results also show that 80 percent of parents in the FTF North Pima Region and 56 percent in the FTF Central Pima Region understand that children receive a greater benefit from talking to a person in the same room compared to hearing someone talk on the TV. Additionally, 97 percent of parents in both regions understand emotional closeness can strongly influence a child's intellectual development, which is one percent higher than the state.¹⁰⁶

¹⁰⁶ Arizona First Things First (2012). Family and Community Survey.

85% of parents in the FTF North Pima Region and **62%** of parents in the Central Pima Region understand that a child's capacity for learning is not set from birth and can be increased or decreased by parental interaction, both of which are higher than Arizona

80% of parents in the FTF North Pima Region and **56%** of parents in the Central Pima Region understand that children receive a greater benefit from talking to a person in the same room compared to hearing someone talk on the TV.

97% of parents in the FTF North Pima Region and FTF Central Pima Region understand that emotional closeness can strongly influence a child's intellectual development, which is **1%** higher than Arizona.

In the FTF North Pima and Central Pima Regions parents also understand the importance of play for young children of all ages. In the North Pima Region, over two-thirds of parents (71%) recognize the crucial importance of play for children 10 months old, more than 85 percent understand that play is important for 3-year-olds, and 95 percent understand that play is important for 5-year-olds. All of these are higher in the FTF North Pima Region than the state (see Exhibit 6.1). In contrast, fewer parents in the FTF Central Pima Region recognized the crucial importance of play for 10-month-olds (63%), for 3-year-olds (62%), and for 5-year-olds (71%).

Exhibit 6.1. Percentage of parents that understand the crucial importance of play for children of different ages

Arizona First Things First (2012). Family and Community Survey.

The FTF Family and Community Survey also asked respondents about their understanding of age appropriate behaviors and expectations for children. A series of questions asked about a scenario

where a child walks up to the TV and begins to turn the TV on and off repeatedly. More than 80 percent of parents in both regions correctly identified that this behavior likely means that the child wants to get his or her parents' attention or enjoys learning about what happens when buttons are pressed. Additionally, in the FTF North Pima Region 76 percent correctly responded that it is not at all likely that the child is angry at her parents, compared to 54 percent in the Central Pima Region (see Exhibit 6.2).

Exhibit 6.2. Parent understanding of child behaviors in the FTF Pima North Region

If a child walks up to the TV and begins to turn the TV on and off repeatedly, how likely is it that...	Very likely		Somewhat likely		Not at all likely		Not sure	
	North Pima	Central Pima	North Pima	Central Pima	North Pima	Central Pima	North Pima	Central Pima
The child wants to get her parents' attention	50%	54%	41%	29%	7%	16%	2%	1%
The child enjoys learning about what happens when buttons are pressed	74%	74%	21%	21%	4%	5%	0%	0%
The child is angry at her parents for some reason or she is trying to get back at them	3%	24%	19%	21%	76%	54%	2%	0%

Arizona First Things First (2012). Family and Community Survey.

The FTF Family and Community Survey assessed parent or caregiver perceptions around spoiling their child. More than half of survey respondents in the FTF North Pima Region (56%) and the FTF Central Pima Region (57%) correctly responded that a fifteen-month-old baby should not be expected to share her toys with other children and nearly 70 percent in both regions correctly responded that a 3-year-old child should not be expected to sit quietly for an hour or so. Although more than half of respondents correctly responded about appropriate behaviors for children, less than half (39-40%) in both regions, correctly responded that a six-month-old is too young to spoil. About half of respondents correctly identified that picking up a three-month-old every time she cries and letting a two-year-old get down from the dinner table to play before the rest of the family was appropriate behavior. More than 80 percent (84%) in the FTF North Pima Region and 70 percent in the FTF Central Pima Region also identified that letting a five-year-old choose what to wear to school every day is appropriate.

56% of parents in the FTF North Pima Region and **57%** in the FTF Central Pima said a 15-month-old baby should not be expected to share her toys with other children

68% of parents in the FTF North Pima Region and **69%** in the FTF Central Pima said a 3-year-old child should not be expected to sit quietly for an hour or so

39% of parents in the FTF North Pima Region and **40%** in the FTF Central Pima said a 6-month-old is too young to spoil

Exhibit 6.3 Parent Ratings of Child Behavior

Parents who rated the following behavior as appropriate:	North Pima	Central Pima
Picking up a three-month-old every time she cries	57%	70%
Letting a two-year-old get down from the dinner table to play before the rest of the family	47%	36%
Letting a five-year-old choose what to wear to school every day	84%	70%

Arizona First Things First (2012). Family and Community Survey.

More than half of parents or other family members in the FTF North Pima Region reported either reading, drawing, or telling stories/singing songs to their children six or seven days a week.¹⁰⁷

Child Abuse and Domestic Violence

Maltreatment of children during early childhood has been shown to negatively affect child development, including cognitive development, attachment, and academic achievement.¹⁰⁹ Research shows that family support services, like home visiting, can improve parenting skills and home environments, which are likely associated with improved child well-being and decreases in maltreatment over time.¹¹⁰

From October 2014 to September 2015 there were 9,504 reports of maltreatment of children under age 18 in Pima County.¹¹¹ Of those, 9,433 reports were investigated, 6,080 cases were unsubstantiated, and

971 cases of child abuse and neglect were substantiated, i.e. determined to be true, by the Department of Child Services, with the majority of them being neglect cases (see Exhibits 6.4-6.8). In addition, between October 1, 2014 and September 30, 2015, approximately 13 percent of reports of maltreatment that were assigned for investigation resulted in a child being removed (see Exhibit 6.9).

Behavioral Health Services

Behavioral health focuses on the promotion of family well-being through the prevention or intervention of mental health issues, such as depression or addiction. Children of parents with mental health issues often grow up in inconsistent and unpredictable family environments and are at risk for developing social, emotional, and/or behavioral problems.¹¹² The behavioral health services discussed in this section include behavioral health day programs, crisis intervention services, inpatient services, medical services, rehabilitation services, support services, and treatment services. In the FTF Pima North Region over 1,000 female caregivers and nearly 2,500 children ages zero to five received behavioral health services from the Arizona Department of Health Services in 2015. Exhibit 6.12 and Exhibit 6.13 show how the number of female caregivers and children served has varied over the years in the region and statewide.

Juvenile Arrests and Substance Use

The number of juvenile arrests for children ages eight to seventeen in Pima County decreased drastically from 2010 to 2014, falling by 35 percent (see Exhibit 6.14). See appendices 6.1–6.2 for additional information on the type of arrests and number of arrests for Arizona.

Exhibit 6.14. Arrests of children ages 8 to 17

Kids Count Data Center (2014). Juvenile Arrests. Retrieved from <http://datacenter.kidscount.org/>

In Pima County use of alcohol and cigarettes among adolescents has shown a steady decline from 2010 to 2014 as reported by the Arizona Youth Survey. In 2014, 72 percent of 12th graders reported using alcohol compared to 79 percent in 2010. In 2014, 39 percent of 12th graders reported using cigarettes compared to 54 percent in 2010 (see Exhibit 6.15 and Exhibit 6.16). While use of alcohol and cigarettes among adolescents has shown a consistent decline in recent years, marijuana usage rates have not shown a consistent trend. In 2014, nearly half of 12th graders (48%) reported using marijuana (see Exhibit 6.17).

Home Visitation Landscape Scan

The intent of the evidence-based Home Visitation strategy is to provide personalized support for families with young children during pregnancy and through the children's first years of life, particularly as part of a comprehensive and coordinated system. Expected outcomes that are common to home visitation programs include: improved child health and development, increase in children's school readiness, enhancement of families' abilities to support their children's development, decreased incidence of child maltreatment, and improved family economic self-sufficiency and stability.¹¹³

Decades of research and evidence demonstrate that home visitation can be an effective method of delivering family support and child development services.¹¹⁴ A variety of evidence-based models exist to address the spectrum of universal, targeted, or specialized needs of particular populations such as first time caregivers, teen parents, families at-risk for abuse or neglect, or low-income families. The experience and credentials of the home visitor, the duration and intensity of the visits, and the end goal or focus of the intervention are critical to implementation and achieving the intended impacts. Comprehensive, evidence-based home visitation programs provide participating families of infants and toddlers with information, education, and support on parenting, child development, and health topics, while simultaneously assisting with connections to other resources or programs as needed. Having a portfolio of high-quality home visiting programs is beneficial for serving the diverse needs of Arizona's children and families.

Home visiting is defined as a voluntary enrollment program in which early childhood and health professionals, such as nurses, social workers, or trained and supervised paraprofessionals repeatedly visit the homes of pregnant women or families with children prenatal through age 5 (not yet in kindergarten) who are at higher risk of exposure to familial and environmental factors that have the potential to impact their healthy development.

With a broad base of evidence supporting the impact of home visitation programs, the FTF Pima North Regional Partnership Council contracted with Harder+Company Community Research to conduct a landscape scan of the home visitation programs being implemented across the region to assess the current network of home visiting services in the FTF Pima North Region and identify the strengths and resources available, as well as the gaps and overlaps of services.

¹¹³ US Department of Health Resources and Services Administration (HRSA) Maternal & Child Health; <https://mchb.hrsa.gov/maternal-child-health-initiatives/home-visiting-overview>

¹¹⁴ Mathematica, 2014

The following data sources were incorporated in the landscape scan:

- Existing documents including the FTF standards of practice and previous Home Visitation reports
- Discussion with the FTF Pima North Regional Director and Home Visitation Referral Coordinator
- Stakeholder interviews with program directors and home visitation staff
- Facilitated discussion with members of the Family Support Alliance

Summary of Home Visitation Programs in the FTF Pima North Region

Exhibit 6.18 highlights key details for each of the Home Visitation models offered in the FTF Pima North Region as described by interviewees. The table describes each of the models provided in the region, the organizations implementing the models, the funding sources, the eligibility criteria and the strengths of the model. Most programs target Pima County in general. Each program has specific eligibility criteria for families and many of them serve low-income families, teens, refugee families, and families with special needs.

Exhibit 6.19 displays the total number of families enrolled in home visitation by poverty and population rates. Sub-regions with high populations and high poverty rates generally had 75 or more families enrolled in home visitation while regions with low poverty and low populations had fewer than 25 families enrolled in home visitation.

Exhibit 6.19 Population, Poverty and Home Visits

Referrals

The home visitation system in Pima North is unique in that it has a centralized referral system to help connect families to the most appropriate home visitation program for their needs. Partners within the system often send referrals to the centralized referral system (e.g. if a family does not fit their program requirements) in order to connect the family to the appropriate program. However, several stakeholders indicated that they rarely receive referrals directly from the centralized referral system.

Interviewees indicated that many of the agencies conduct their own outreach to enroll families in the program, whether through events, doctor's offices, or media campaigns. Others indicated that families come to them via word-of-mouth or self-referrals. There are also referrals that come from other organizations such as WIC, Primeros Pasos, or the Department of Child Services (DCS).

Barriers/Challenges to Participation

Stakeholders indicated there were several barriers that families experience that might make them less likely to enroll or maintain home visitation services.

- **Scheduling/time constraints:** Although home visitors are very accommodating to families' schedules, oftentimes it can be challenging for some families to find the time to participate, especially if the parent is going back to school or work.
- **Discomfort with welcoming someone into their home:** Working with higher risk families, there are often times trust issues and families are not always comfortable welcoming a stranger into their home. Sometimes, parents may associate home visitation with the Arizona DCS and are reluctant to participate because of this perceived association.
- **Meeting language needs of families:** It can be challenging to find and retain bilingual home visitors that can support families who speak many different languages and who are also trained in social services.
- **Mobility of families:** Families tend to move a lot both out of the area and within the area, which makes it challenging to keep them engaged.
- **Staff turnover:** Turnover in staff at home visiting agencies makes it challenging to keep families engaged, especially when they become comfortable with a specific home visitor.
- **Transportation for Additional Activities:** Although a huge asset to home visitation programs is the fact that home visitors travel to families' homes, there are often activities available to program participants such as moms groups or story time. Not all families have easy access to transportation and therefore they cannot always participate in these additional activities.

Key Strengths of Individual Home Visitation Programs in the FTF Pima North Region

Programs within the FTF Pima North Home Visitation system have individual strengths that contribute to the overall strengths of the Home Visitation system as a whole. Some of the strengths highlighted by interviewees are included in Table 1. They include evidence-based models, improving parent confidence, preventing child maltreatment, varying time commitments for each program, and supporting children's learning.

Most of the home visitation programs utilized in the region are evidence-based models which require a certain amount of implementation fidelity to ensure maximum impact on families. Programs have different requirements for staff that must be met in order to keep the fidelity of the model. The majority of the programs are flexible, with services being provided to families when they are available and at their home. The programs are also family-centered and focus on what the family needs to thrive. Although there are many strengths of the individual programs, each also struggles with staff retention and meeting the requirements of different funders.

Key Strengths of the Home Visitation System in the FTF Pima North Region

The FTF Pima North Home Visitation System offers a variety of models to support families with young children. This diverse array of programs is a key strength of the system as a whole because different programs may better suit specific families. Several interviewees and meeting participants highlighted the importance of the Family Support Alliance (FSA), which provides a venue for key partners in home visitation and parent education programs to come together to discuss resources and questions and to strategize about improving the overall systems in the region. Strengths of the FSA include:

- Allowing for communication between agencies providing home visitation throughout the region;
- Having one centralized resource for community members with questions regarding home visitation (one coordinator). For example, if someone is interested in learning more about home visitation in the region, the FSA coordinator has a strong understanding of all of the programs and can easily connect people to the appropriate resources;
- Providing professional development opportunities for home visitation staff such as conferences and trainings;
- Building trust between individual agencies and programs;
- Bringing home visitors and home visitation program staff together to discuss strengths, challenges and strategies on a monthly basis;
- Focusing on a continuum of services that ensures families are connected to the appropriate programs and referred on to additional services if needed;
- Providing networking and learning opportunities, like the Annual Conference.

The centralized referral system also provides an element of coordination between programs within the system. However, one interviewee indicated that it was underutilized and it does not do a lot for individual programs. There was also concern that, since funding has changed, the new referral system may prioritize some Pima County Health Department programs over others.

Impact on Families

Not only does the Home Visitation system provide important services to families in the region, it also helps connect them to other programs the family might benefit from. The system provides a continuity of services so that the family can transition out of home visitation into another early childhood program, if needed. In addition, home visitation helps prepare children for school by teaching important skills to both the parents and children.

Gaps/Overlaps in Services

Interviewees and FSA participants indicated there were a few gaps in services that could be addressed to improve the overall system.

- **Additional language services:** With growing immigrant and refugee populations in the region, there is a continued need to provide bilingual/bicultural staff and translation services.
- **Need to further engage rural families:** It continues to be a challenge to reach rural families. Some respondents felt that this is because rural families tend to move to rural

- locations to be more secluded and are more hesitant to participate in home visitation.
- **Strengthen link to Airforce base:** One respondent stated that it is hard to get into the airforce base because their services are very insulated and they are not always embracing of outside services.
 - **Expand programs to include more home visitation services for 4-5 year olds:** Many of the programs target zero to three-year-olds leaving a gap of services for four to five-year-olds. Participants at the FSA meeting mentioned that they feel it is important to continue these services for four to five-year-olds, especially as they approach kindergarten. It may also be beneficial to provide home visitors with the tools to help families transition their four to five-year-olds to a preschool program.

Additionally, there is a constant need to adapt outreach strategies to reach the eligible families within the community and to continue to educate providers in the region about the available home visitation programs for families with young children. Though not prevalent and stopped once discovered, there is some overlap of multiple home visitation programs serving the same families, suggesting need for further coordination, especially in the outreach and enrollment process. Additionally, there is a certain level of competition between programs since many of them target the same families (low-income, prenatal, etc.). It may benefit the Pima North Home Visitation System to further explore whether these issues can be resolved through more intentional targeting and coordination of families eligible for home visitation in the region.

Recommendations

Interviewees were asked to provide recommendations on how to improve the overall Home Visitation System. Recommendations include:

- **Improve communication through FSA:** Respondents recommended the FSA continue to facilitate conversations and meetings while also improving overall communication about resources, overlaps and gaps in services, and opportunities for professional development.
- **Improve coordinated referral system:** Interviewees and FSA participants recommended that the group take clear look at the coordinated referrals system's strengths and weaknesses and where it can be improved to ensure that it is effectively serving the Pima North Home Visitation System.
- **Improve coordinated outreach for FTF funded programs:** Since there are several FTF funded home visitation programs, interviewees recommended that there be more communication and coordination between those programs, to ensure there are no overlaps or gaps in services.
- **Improve coordinated outreach to pediatrician offices:** Interviewees recommended more coordinated outreach to pediatrician offices since they are an important resource for referrals to home visitation programs. Coordinated outreach would ensure that pediatricians in the region are being given the same message and know about all of the potential programs for families of young children.

FAMILY SUPPORT AND LITERACY HIGHLIGHTS

In Pima County there were 971 substantiated cases of abuse or neglect from October 2014 to September 2015 and more than 2,000 children under 18 entered out-of-home care. In the county there is only one domestic violence shelter funded by the Department of Economic Security and in 2015 it served 367 adults and 308 children, providing more than 9,000 hours of support services. In recent years the number of arrests for juveniles ages eight to seventeen has decreased, with 7,118 children arrested in 2014 down from 10,753 in 2010. Only 31 percent of respondents to the FTF Family and Community Survey in the FTF Pima North Region and 35 percent in the FTF Central Pima Region understood that parents can significantly impact their child's brain development prenatally. Forty percent of parents from both regions understood that infants can take in and react to the world around them right from birth. Additionally, about half of respondents correctly identified appropriate behaviors and behaviors that will likely spoil the child. Fifty -five percent of respondents in the FTF Central Pima Region and 59 percent of respondents in the FTF North Pima Region reported that they or a family member reads, draws or pretend draws, or tells stories and sings song with their children 6 or more days a week.

Below are some data trends that highlight the needs, assets, and data-driven considerations for the FTF Pima North Region based on the data highlighted above. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
The majority of parents understand the importance of play and engage in activities with their child almost every day.	Continue to educate parents on the importance of play and engaging in developmentally stimulating activities with their children daily.
Parents in the region scored higher on child development questions than in the state.	Continue to educate parents on parents' impact on their child's development, especially starting at the prenatal stage.
There are a variety of home visitation programs offered in the region.	Continue to offer and promote a variety of home visitation programs to families in the region. Also discuss providing a transition from home visitation programs that serve 0-3 year olds to PreK programs that service 4-5 year olds.

Needs	Considerations
In Pima County there were more than 356 substantiated cases of abuse or neglect in FY 2014-2015 and there is only one domestic violence shelter.	Support programs that help young families or children that have been exposed to violence.
Only 31% of parents in the FTF Pima North Region understand that they can significantly impact their child's brain development in the prenatal stage and 40% of parents understand that an infant or young child can really take in and react to the world around them right from birth	Expand messaging and parent education on the importance of parent engagement and involvement starting prenatally.

7. Communication, Public Information, and Awareness

Why It Matters

Public awareness of the importance of early childhood development and health is a crucial component of efforts to build a comprehensive and effective early childhood system in Arizona. Building public awareness and support for early childhood is a foundational step that can impact individual behavior as well as the broader objectives of system building. For the general public, information and awareness is the first step in taking positive action in support of children from birth to five years old, whether that is influencing others by sharing the information they have learned within their networks or taking some higher-level action such as elevating the public discourse on early childhood by encouraging increased support for programs and services that impact young children. For parents and other caregivers, awareness is the first step toward engaging in programs or behaviors that will better support their child's health and development.

Unlike marketing or advocacy campaigns which focus on getting a narrowly-defined audience to take short-term action, communications efforts to raise awareness of the importance of early childhood development and health focus on changing what diverse people across Arizona value and providing them multiple opportunities over an extended time to act on that commitment.

There is no one single communications strategy that will achieve the goal of making early childhood an issue that more Arizonans value and prioritize. Therefore, integrated strategies that complement and build on each other are key to any successful strategic communications effort. Employing a range of communications strategies to share information – from traditional broad-based tactics such as earned media to grassroots, community-based tactics such as community outreach – ensures that diverse audiences are reached more effectively wherever they are at across multiple mediums. Other communications strategies include: strategic consistent messaging, brand awareness, community awareness tactics such as distribution of collateral and sponsorship of community events, social media, and paid media which includes both traditional and digital advertising. Each of these alone cannot achieve the desired outcome of a more informed community, so a thoughtful and disciplined combination of all of these multiple information delivery vehicles is required. The depth and breadth of all elements are designed to ensure multiple touch-points and message saturation for diverse audiences that include families, civic organizations, faith communities, businesses, policymakers and more.

What the Data Tell Us

Since state fiscal year 2011, First Things First has led a collaborative, concerted effort to build public awareness and support across Arizona employing the integrated communications strategies listed above.

Results of these statewide efforts from SFY2011 through SFY2016 include:

- More than 2,000 formal presentations to community groups which shared information about the importance of early childhood;
- Nearly 230 tours of early childhood programs to show community members and community leaders in-person how these programs impact young children and their families;

- Training of almost 8,700 individuals in using tested, impactful early childhood messaging and how to best share that message with others;
- The placement of more than 2,400 stories about early childhood in media outlets statewide;
- Increased digital engagement through online platforms for early childhood information, with particular success in the growth of First Things First Facebook Page Likes, which grew from just 3,000 in 2012 to 124,000 in 2016.
- Statewide paid media campaigns about the importance of early childhood from FY10 through FY15 included traditional advertising such as television, radio and billboards as well as digital marketing. These broad-based campaigns generated millions of media impressions over that time frame; for example in FY15 alone, the media campaign yielded over 40 million media impressions.

In addition, First Things First began a community engagement effort in SFY2014 to recruit, motivate and support community members to take action on behalf of young children. The community engagement program is led by community outreach staff in regions which fund the First Things First Community Outreach strategy. This effort focuses on engaging individuals across sectors – including business, faith, K-12 educators, and early childhood providers – in the work of spreading the word about the importance of early childhood since they are trusted, credible messengers in their communities. FTF characterizes these individuals, depending on their level of involvement, as Friends, Supporters, and Champions. Friends are stakeholders who have a general awareness of early childhood development and health and agree to receive more information and stay connected through regular email newsletters. Supporters have been trained in early childhood messaging and are willing to share that information with their personal and professional networks. Champions are those who have been trained and are taking the most active role in spreading the word about early childhood.

Supporters and Champions in the engagement program reported a total of 1,088 positive actions taken on behalf of young children throughout Arizona as of the end SFY16. These actions range from sharing early childhood information at community events, writing letters to the editor to connecting parents to early childhood resources and more. The table below shows total recruitment of individuals in the tiered engagement program through SFY2016.

Exhibit 7.1: First Things First Engagement of Early Childhood supporters, SFY2014 through SFY2016.

FTF	Friends	Supporters	Champions
Pima Regions	1,415	170	72
Arizona	21,369	3,102	908

Pima North and Pima South regions have a shared model of Community Outreach coverage.

In addition to these strategic communications efforts, First Things First has also led a concerted effort of policymaker awareness-building throughout the state. This includes meetings with all members of the legislature to build their awareness of the importance of early childhood. FTF sends emails to all policymakers providing information on the impact of early childhood investments (such as the FTF annual report) and also has instituted a quarterly email newsletter for policymakers and their staff with the latest news regarding early childhood.

Furthermore, the Arizona Early Childhood Alliance – comprised of early childhood system leaders like FTF, the United Ways, Southwest Human Development, Children’s Action Alliance, Read On Arizona, Stand for Children, Expect More Arizona, and the Helios Foundation – represent the united voice of the early childhood community in advocating for early childhood programs and services.

Finally, FTF recently launched enhanced online information for parents of young children, including the more intentional and strategic placement of early childhood content and resources in the digital platforms that today’s parents frequent. Future plans for this parenting site include a searchable database of early childhood programs funded in all the regions, as well as continuously growing the amount of high-quality parenting content available on the site and being “pushed out” through digital sources.

COMMUNICATION, PUBLIC INFORMATION AND AWARENESS HIGHLIGHTS

Public awareness of the importance of early childhood development and health is a crucial component of efforts to build a comprehensive and effective early childhood system in Arizona. Building public awareness and support for early childhood is a foundational step that can impact individual behavior as well as the broader objectives of system building.

There is no one single communications strategy that will achieve the goal of making early childhood an issue that more Arizonans value and prioritize. Therefore, integrated strategies that complement and build on each other are key to any successful strategic communications effort. Employing a range of communications strategies to share information – from traditional broad-based tactics such as earned media to grassroots, community-based tactics such as community outreach – ensures that diverse audiences are reached more effectively wherever they are at across multiple mediums. Other communications strategies include: strategic consistent messaging, brand awareness, community awareness tactics such as distribution of collateral and sponsorship of community events, social media, and paid media which includes both traditional and digital advertising.

In addition, FTF began a community engagement effort in SFY2014 to recruit, motivate and support community members to take action on behalf of young children. In the Pima Regions, 1,415 friends, 170 supporters and 72 champions were involved in the engagement program. Given the results of the survey below are some data trends that highlight the needs, assets, and data-driven recommendations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Considerations
FTF utilizes integrated strategies to communicate the importance of making early childhood an issue Arizonans value.	Continue to utilize integrated strategies to highlight the importance of early childhood development and health.
FTF engages community members to take action on behalf of young children.	Continue to engage community members through the community engagement program.

8. System Coordination Among Early Childhood Programs and Services

Why it Matters

The partners in Arizona’s early childhood system – encompassing a diverse array of public and private entities dedicated to improving overall well-being and school readiness for children ages zero to five statewide – work to promote and establish a seamless, coordinated, and comprehensive array of services that can meet the multiple and changing needs of young children and families.

In January 2010, the Arizona Early Childhood Task Force was convened by FTF to establish a common vision for young children in Arizona and to identify priorities and roles to build an early childhood system that will lead to this vision. System coordination was identified as one of the priority areas by Arizona’s early childhood system partners. The Task Force identified six system outcomes including that the early childhood system be “coordinated, integrated, and comprehensive.” First Things First’s role to realize this outcome is to foster cross-system collaboration between local, state, federal, and tribal organizations to improve the coordination and integration of Arizona programs, services, and resources for young children and their families.

Through strategic planning and system-building efforts that are both FTF-funded and non-FTF-funded, FTF is focused on developing approaches to connect various areas of the early childhood system. When the system operates holistically, the expectation is a more seamless system of coordinated services that families can easily access and navigate in order to meet their needs. Agencies that work together and achieve a high level of coordination and collaboration help to establish and support a coordinated, integrated, and comprehensive system. At the same time, agencies also increase their own capacity to deliver services as they work collectively to identify and address gaps in the service delivery continuum.

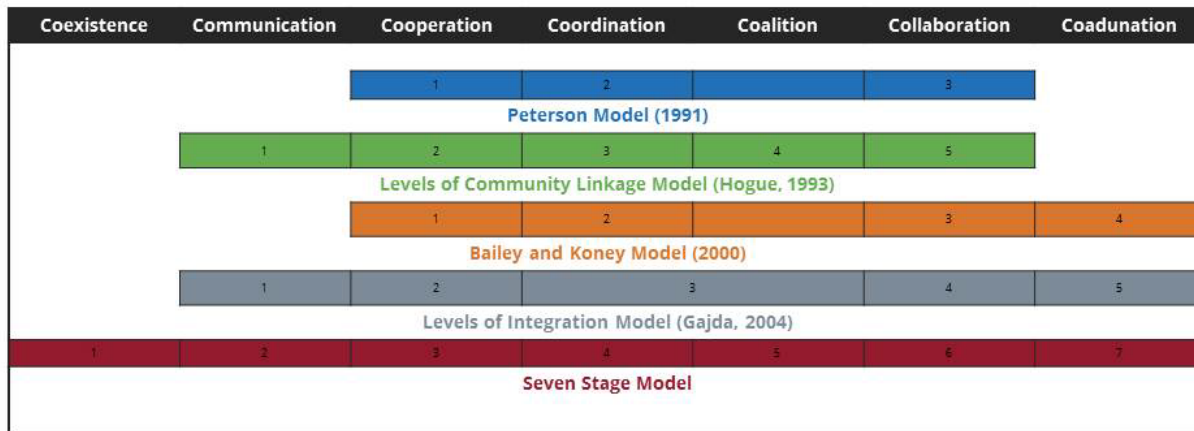

Service coordination and collaboration approaches work to advance the early childhood system in the following ways:

- Build stronger collaborative relationships amongst providers
- Increase availability and access of services for families and children
- Reduce duplication
- Maximize resources
- Long term sustainability
- Leverage existing assets
- Improve communication
- Reduce fragmentation
- Foster leadership capacity among providers
- Improve quality
- Share expertise and training resources
- Influence policy and program changes

Several authors have examined coordination and collaboration efforts in terms of stages or levels of collaboration among organizations (see Exhibit 8.1). Frey et al. noted that stage theories describe levels of collaboration, with the lowest level being little or no collaboration and the highest level being full

collaboration or some form of coadunation or unification.¹¹⁵ These models may differ on the number of stages, the range of levels included, and the definitions of various stages, but they have much in common. The figure below depicts numerous stage models in the research literature along a continuum of collaboration.

Exhibit 8.1. Levels of Collaboration

Grounded in the work of stage theorists, First Things First adopted a 5 stage level of collaboration model based levels of a continuum of collaboration.

- No Interaction: No interactions occurring at all.
- Networking: Activities that result in bringing individuals or organizations together for relationship building and information sharing. Networking results in an increased understanding of the current system of services. There is no effort directed at changing the existing system. There is no risk associated with networking.
- Cooperation: Characterized by short-term, informal relationships that exist without a clearly defined mission, structure, or planning effort. Cooperative partners share information only about the subject at hand. Each organization retains authority and keeps resources separate. There is very little risk associated with cooperation.
- Coordination: Involves more formal relationships in response to an established mission. Coordination involves some planning and division of roles and opens communication channels between organizations. Authority rests with individual organizations, however, risk increases. Resources are made available to respondents and rewards are shared.
- Collaboration: Collaboration is characterized by a more durable and pervasive relationship. Respondents bring separate organizations into a new structure, often with a formal commitment to a common mission. The collaborative structure determines authority and

¹¹⁵ Frey, B.B., Lohmeier, J.H, Lee, S.W., & Tollefson, N. (2006) *Measuring collaboration among grant partners. American Journal of Evaluation*, 27, 383.

leadership roles. Risk is greater. Partners pool or jointly secure resources, and share the results and rewards.

Coordination and Collaboration Survey

System partners in 18 First Things First county-based regions were asked by First Things First to participate in the Coordination and Collaboration Survey in an effort to learn more about how system partners view their role in the region's early childhood system and to what extent they collaborate and coordinate with other system partners. Ten regions elected to conduct region-specific surveys, including Cochise, Coconino, Gila, Graham/Greenlee, La Paz Mohave, Navajo Apache, Pinal, Santa Cruz, Yavapai, and Yuma. Additionally, the six FTF regions in Maricopa County (Phoenix North, Phoenix South, East Maricopa, Northwest Maricopa, Southeast Maricopa, and Southwest Maricopa) and the two FTF regions in Pima County (Pima North and Pima South) elected to conduct combined county-wide surveys. Partners located on tribal lands will be surveyed at a later date after tribal approvals are requested and received.

FTF regional staff identified potential respondents of the survey. Each region was asked to determine who (across the categories listed below) the early childhood system stakeholders were in their communities that would be able to speak to their experience in the system. If there were no stakeholders representing a category, it was acceptable to not have representation from that category. As mentioned above, surveys on tribal lands were not conducted because tribal approvals for this survey have not yet been requested. Thus, the list of possible respondents was not a systematic or exhaustive list of potential respondents, and the pool of system partners who were invited to participate was not necessarily comparable across different regions.

Possible stakeholder areas:

- Potential Categories
- Higher Education
- K-12 Education
- Community Family Support Programs
- Public/Community Health Programs
- Child Care/Early Learning/Head Start Programs
- Professional Development
- State/City/County Governments
- Public Library
- Philanthropy/Foundations
- Faith Based Organizations
- Military
- Coalition/Networking Groups (including Read On)
- Community Service Groups
- FTF Grant Partner
- Other

Prospective participants received an email invitation to participate from the First Things First Regional Directors in October of 2016 and given three weeks to respond. Potential respondents were also contacted by email and/or telephone to remind them about the participation.

Responses were collected via SurveyMonkey. Data were then cleaned and compiled by region by the First Things First Evaluation team.

What the Data Tell Us

The results are based on the responses from 64 respondents that participated in the survey from Pima County out of 99 individuals that were contacted to participate (a 65% survey response rate). The respondents represent both the Pima North and Pima South regions. The majority of the respondents work for Family Support/Social Service agencies (34%), Early Care and Education organizations (30%), and K-12 education (11%), while businesses were not invited to participate in this survey (see Exhibit 8.2).

Exhibit 8.2. Sectors with which organizations work (n=64)

Sector	Percentage
Family Support/Social Service	34.4%
Early Care and Education	29.7%
K-12 Education	10.9%
Other Type of Organization	9.4%
Health Care or Medical Organization	6.3%
Higher Education Organization	4.7%
State Agency	1.6%
Local/Public Entity	1.6%

System Partners’ View of Their Role in the Early Childhood System

The majority of respondents (95%) consider themselves to be a part of the early childhood system in Pima County (data not shown). Furthermore, survey respondents reported that they engaged with all four areas of the early childhood system: Family Support and Literacy, Early Learning, Child’s Health, and Professional Development. Not surprisingly, given the large percentage of respondents from the education sector (see Exhibit 8.2), the area within the early childhood system that the majority of respondents engaged with was Family Support and Literacy (83%; see Exhibit 8.3).

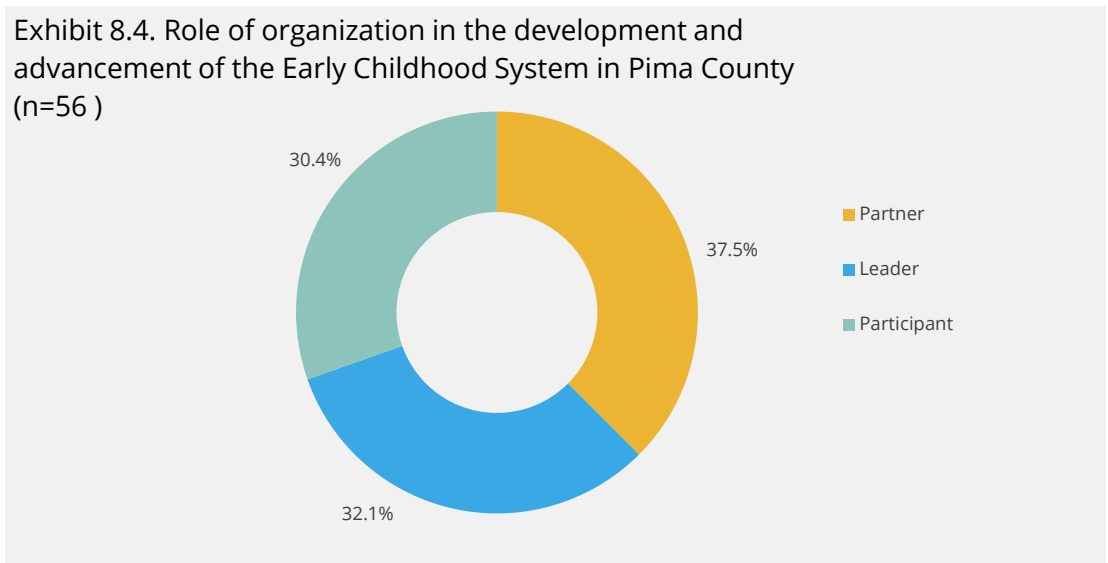

Exhibit 8.3. Area(s) of the early childhood system that organizations engage with (n=64)

Role of an Organization in the Early Childhood System

An organization may take on different roles in an early childhood system. An organization may be a participant, partner, or leader. In the role of a participant, the organization is one of many community members involved in a community-based initiative. As a partner, the organization is part of a group responsible for co-convening and/or facilitation and is one of many community members involved in a community-based initiative. Finally, as a leader, the organization is responsible for convening and facilitating a group of community members (i.e., taking a lead role to bring community members together to implement an initiative).

Exhibit 8.4. Role of organization in the development and advancement of the Early Childhood System in Pima County (n=56)

When asked about their organizations' role in the development and advancement of the early childhood system in Pima County, the majority of respondents viewed their organization's role as a partner (38%), one of many community organizations involved in supporting the early childhood system. This was followed by leader (32%) and then participant (30%; see Exhibit 8.4).

In their role as participant, partner, or a leader, survey respondents noted several successful partnerships. Respondents reported that their organizations work collaboratively with many social services agencies and medical providers and partner in several coalitions such as the Family Support Alliance and First Focus on Kids. They also take part in the leadership teams, such as on the Cradle 2 Career initiative. These connections to coalitions and larger system building help ensure that organizations maintain a system of services related to early childhood. One respondent commented on the impact these partnerships have had, noting that their organization's fifteen year partnership with a local hospital that provides free space for family classes has been instrumental in the promotion of their program and has allowed them to reach hundreds of families. Other key areas of success included partnerships with Pima County Libraries in Pima North, which provide Stay and Play opportunities for families residing in the Northwest community, as well as with TOPS Dad Programming, which promotes and provides services to fathers. Additional partnerships mentioned were with Parents as Teachers, the Greater Oro Valley Chamber of Commerce, Easter Seals Blake Foundation and Nurse Family Partnership, Pima County Parenting Coalition, Children's Clinics, WIC, Strong Start Tucson, and Read On Tucson.

System Partners' Perspective on Systems Building

Respondents were also asked to provide their perspective on the early childhood system and systems building. Early childhood system building is the ongoing process of developing approaches and connections that make all the components of an early childhood system operate as a whole to promote shared results for children and families. In Arizona, early childhood system partners work to promote and establish a seamless, coordinated, and comprehensive array of services that can meet the multiple and changing needs of young children and families to help ensure that kids arrive at school healthy and ready to succeed.

Exhibit 8.5. Describe the Early Childhood System in Pima County (n=46)

Overall, a majority of survey respondents describe the early childhood system in Pima County as a partially coordinated system (53%), with over one-third of respondents (39%) describing the system as a well-coordinated system, and eight percent viewing the early childhood system as a group of separate, uncoordinated system partners working in isolation (see Exhibit 8.5). As highlighted above, there are many organizations and coalitions involved in the early childhood system in Pima County. Many of these coalitions serve individual purposes and do not always have a connection to each other.

The majority of respondents across all areas agreed that the early childhood system in Pima County effectively addresses the needs of young children (see Exhibit 8.6). The percentage of agreement was highest in the Children’s Health area (89%), followed by the Family Support and Literacy (86%), Professional Development (83%), and Early Learning (74%) areas. Early Learning may have the lowest percentage of respondents agreeing that the system effectively addresses the needs of young children because there are still many families in the region who do not have access to childcare. In addition, in Pima North there is a large waitlist for programs to enter the Quality First system which may also give the perception that the system is lacking in that area.

Exhibit 8.6. Extent to which the Early Childhood System in Pima County effectively addresses the needs of young children and their families across Early Childhood Development System (n=34)

	 Family Support and Literacy	 Children’s Health	 Early Learning	 Professional Development⁺
Agree [*]	85.3%	88.6%	74.3%	82.9%
Disagree ^{**}	14.7%	11.4%	25.7%	17.1%

^{*} The percentage of respondents that responded ‘agree’ or ‘strongly agree’ have been aggregated and represent as the number shown.
^{**} The percentage of respondents that responded ‘disagree’ or ‘strongly disagree’ have been aggregated and represented as the number shown.

Continuum of Collaboration in the Early Childhood System Areas

FTF has adopted a five level continuum of collaboration model grounded in the work of stage theorists based on the following levels of collaboration: (1)no Interaction; (2) networking; (3) cooperation; (4) coordination; and (5) collaboration.¹¹⁶ These five levels were defined (see Exhibit 8.1) and utilized to gain a better understanding of system partners’ perspectives on the level of collaboration that is occurring among partners in Pima County within each area of the early childhood system.

¹¹⁶ Frey, B.B., Lohmeier, J.H, Lee, S.W., & Tollefson, N. (2006) *Measuring collaboration among grant partners. American Journal of Evaluation*, 27, 383.

Exhibit 8.7. The five levels of the Continuum of Collaboration

Respondents were asked to refer to the Continuum of Collaboration (see Exhibit 8.7) and indicate the level of collaboration that is occurring among partners in Pima County for each area of the early childhood system. The results indicate moderately high levels of support for the highest and most intense level of system partners working together along the Continuum of Collaboration. Within the area of Family Support and Literacy, 48 percent of respondents indicated that Collaboration was occurring among partners in Pima County. This was followed by the areas of Professional Development (47%), Early Learning (27%), and Children’s Health (13%; see Exhibit 8.8).

Exhibit 8.9. Continuum of Collaboration in the Early Childhood System Areas

In the area of Family Support and Literacy and in the area of Professional Development a majority of the respondents noted that there was Collaboration among system partners (48% and 47% respectively; see Exhibit 8.9). In the area of Early Learning, a majority of respondents selected Coordination (33%). Coordination, a relationship of relatively high intensity, involves more formal planning and division of roles and opens communication channels between organizations. This is somewhat different from the Children’s Health area, where respondents indicated Cooperation (30%) as the most prevalent mode of relationships between system partners (see Exhibit 8.9). The higher levels of Collaboration for Professional Development and Family Support may be due to the Family Support Alliance (FSA) and Great Expectations for Teachers, Children and Families Community of Practice (CoP), which both receive funding and help with collaboration efforts in the region.

Sectors involved in the Early Childhood Building

Respondents were also asked to indicate which sectors are involved in systems building within each of the four areas of the early childhood system. Not surprisingly, respondents noted that the sectors engaged in the system building work within the Family Support and Literacy area are largely Family Support/ Social Service Agencies (84%). This was followed by the Early Care and Education (68%, see Exhibit 8.10).

In the area of Children’s Health, respondents indicated that the Health Care/ Medical Sector (72%), followed by State Agencies (68%) were the most engaged in systems buildings.

In Early Learning, Early Care and Education (85%) played the largest role, followed by the State Agencies (81%) and K-12 Education (65%). Finally, in the area of Professional Development, respondents indicated that Early Care and Education (75%) were mostly involved, followed by the Family Support/Social Services (71%) and State Agencies (68%).

Exhibit 8.10. The sectors involved in/engaged in system building work in Pima County.

	N	State Agency	Early Care & Edu	Family Support/ Social Service Agency	Philanthropy	K-12 Edu	Higher Edu	Advocacy	Local/ Public Entity	Business	Health Care/ Medical	Other
Family Support and Literacy	25	52.0%	68.0%	84.0%	32.0%	40.0%	28.0%	52.0%	52.0%	28.0%	44.0%	12.0%
Children's Health	25	68.0%	36.0%	48.0%	16.0%	32.0%	12.0%	48.0%	48.0%	8.0%	72.0%	8.0%
Early Learning	26	80.8%	84.6%	53.9%	34.6%	65.4%	34.6%	53.9%	53.9%	26.9%	26.9%	7.7%
Professional Development	28	67.9%	75.0%	71.4%	28.6%	46.4%	57.1%	39.3%	42.9%	14.3%	21.4%	7.1%

While earlier items asked system partners about the level of collaboration occurring among system partners, when a survey item asking respondents about how frequently key activities were occurring that are known indicators of collaborative work, many respondents indicated they did not know how often activities related to system building work were occurring in Pima County. Several other respondents opted not to answer this survey item (n=29). Those that did respond (n=40) noted that system partners within Family Support and Literacy share facility space in some way, have some knowledge of other program's intake requirements and referral processes, and have some coordination of outreach and referrals. Participation in standing inter-agency committees is another key activity that system partners identified doing together. When thinking about activities along the continuum of collaboration, the types of activities that respondents indicated are occurring represent networking, cooperation, and coordination type activities within the continuum. Areas where a high number of respondents indicated that the activity was not happening at all was in the use of shared forms (e.g. common referral and intake forms), and shared record keeping and management of data information systems, which are key activities that align to a high level of collaboration between system partners and represent areas of continued growth for system partners (see Exhibit 8.11).

Exhibit 8.11. System Building Activities in the Family Support Area of the Early Childhood System (n=30)

Activity	Not At All	A little/Somewhat	A Lot	Don't Know
Leveraging resources/funding across partners	3.3%	33.3%	53.3%	10.0%
Sharing facility space	0.0%	42.9%	35.7%	21.4%
Shared development of program materials	3.7%	29.6%	29.6%	37.0%
Coordination of outreach and referrals	3.5%	55.2%	24.1%	17.2%
Knowledge of other programs' intake requirements/referral process	7.4%	40.74%	18.5%	33.3%
Shared record keeping and management of data information systems	11.1%	48.2%	3.7%	37.0%
Co-location of programs or services	0.0%	56.0%	12.0%	32.0%
Partner in program evaluation and/or assessment	7.4%	48.2%	14.8%	29.6%
Jointly conducting staff training	3.9%	26.9%	34.6%	34.6%

Formal written agreements (e.g., MOUs)	3.9%	34.6%	23.1%	38.5%
Environmental scan of other organizations in the community that provide services to young families	7.7%	42.3%	11.5%	38.5%
Other (please describe below)	0.0%	0.0%	0.0%	100.0%

Activities varied in the Children’s Health area with the majority of respondents indicating that activities occurred a little/somewhat (see Exhibit 8.12). More than half of respondents felt that leveraging resources/funding across partners, sharing facility space, shared development of program materials, coordination of outreach and referrals, and knowledge of other programs’ intake requirements/referral process occurred a lot or a little/somewhat. For many of the activities, respondents indicated they did not know whether or not activities were occurring.

Exhibit 8.12. System Building Activities in the Children’s Health Area of the Early Childhood System (n=30)

Activity	Not At All	A little/ Somewhat	A Lot	Don't Know
Leveraging resources/funding across partners	3.3%	33.3%	26.7%	36.7%
Sharing facility space	7.1%	42.9%	10.7%	39.3%
Shared development of program materials	3.4%	37.9%	17.2%	41.4%
Coordination of outreach and referrals	0%	46.7%	20.0%	33.3%
Knowledge of other programs' intake requirements/referral process	3.6%	46.4%	3.6%	46.4%
Shared record keeping and management of data information systems	14.3%	21.4%	3.6%	60.7%
Co-location of programs or services	7.7%	38.5%	3.8%	50.0%
Partner in program evaluation and/or assessment	7.1%	32.1%	10.7%	50.0%
Jointly conducting staff training	3.7%	29.6%	11.1%	55.6%
Shared approach to informing the public of available services	7.7%	26.9%	23.1%	42.3%
Jointly implement policy changes	11.1%	22.2%	7.4%	59.3%
Common forms (e.g., intake and/or referral forms)	11.1%	18.5%	11.1%	59.3%
Child/Family service plan development OR PD plan for ECE professionals	0%	19.2%	11.5%	69.2%
Participation in standing inter-agency committees	7.4%	18.5%	22.2%	51.9%
Informal agreements	3.8%	19.2%	11.5%	65.4%
Formal written agreements (e.g., MOUs)	3.7%	25.9%	18.5%	51.9%
Environmental scan of other organizations in the community that provide services to young families	7.4%	29.6%	7.4%	55.6%
Other (please describe below)	0%	0%	0%	100%

Similarly for Early Learning respondents indicated that most activities occurred a little/somewhat (Exhibit 8.13). More than 25 percent of respondents indicated that leveraging resources/funding across partners, sharing facility space, coordination of outreach and referrals and participation in standing inter-agency committees were happening a lot.

Exhibit 8.13. System Building Activities in the Early Learning Area of the Early Childhood System (n=29)

Activity	Not At All	A little/ Somewhat	A Lot	Don't Know
Leveraging resources/funding across partners	3.4%	37.9%	41.4%	17.2%
Sharing facility space	3.7%	48.1%	29.6%	18.5%
Shared development of program materials	3.7%	37.0%	22.2%	37.0%
Coordination of outreach and referrals	7.1%	39.3%	25.0%	28.6%
Knowledge of other programs' intake requirements/referral process	3.7%	48.1%	11.1%	37.0%
Shared record keeping and management of data information systems	3.7%	29.6%	7.4%	59.3%
Co-location of programs or services	4.0%	44.0%	8.0%	44.0%
Partner in program evaluation and/or assessment	3.7%	40.7%	14.8%	40.7%
Jointly conducting staff training	3.8%	42.3%	15.4%	38.5%
Shared approach to informing the public of available services	3.8%	38.5%	23.1%	34.6%
Jointly implement policy changes	3.8%	26.9%	19.2%	50.0%
Common forms (e.g., intake and/or referral forms)	11.5%	19.2%	15.4%	53.8%
Child/Family service plan development OR PD plan for ECE professionals	0%	26.9%	11.5%	61.5%
Participation in standing inter-agency committees	7.7%	15.4%	30.8%	46.2%

Environmental scan of other organizations in the community that provide services to young families	7.7%	38.5%	11.5%	42.3%
Other (please describe below)	0%	0%	0%	0%

Barriers and Future Directions

Respondents were also asked to reflect on barriers in moving the system forward with other early childhood system partners. The biggest barriers identified were a lack of knowledge among families of the services available and a lack of coordination between providers. Respondents commented that many people do not know about Parent Education and Home Visitation or Early Intervention programs offered within the county and highlighted the need for the network of services to be very visible to families. They identified the lack of coordination of different providers, as well as the ability to locate services that are appropriate, available, cost-effective, and geographically convenient as significant barriers. Additionally, the lack of communication between organizations, preschool directors, and agencies due to lack of time to meet on a regular basis was identified as a barrier.

Finally, respondents were asked to reflect on the role of the FTF Partnership Council in supporting Early Childhood System Building and collaboration efforts in Pima County.

In order to better support Early Childhood System Building and partner collaboration efforts in Pima North, respondents felt the Council could continue making the process of information sharing more transparent and accessible. This includes continuing to provide new ways to share and gain information, such as web-based and rural-based meetings, as well as making it easier for those who provide direct services to communicate with the Council directly. As one respondent shared, “attending a several hour council meeting where you may get two minutes to speak is not realistic for many people who are providing direct service.” They recommended having a way to either email Council members directly, being able to schedule a more in depth information sharing session with the Council independent of a meeting, or having more time allotted during council sessions. Respondents also felt the FTF Partnership Council could help local agencies network with the Pima County Health Department to promote parent education classes and referrals for all programs, as well as to continue to connect with non-FTF entities to leverage funds and support children, families, and ECE professionals. Requiring collaboration efforts in the development of programs was also seen as important by respondents, who felt that without collaboration, organizations are competing against each other to obtain funding from FTF rather than finding a way to work together to serve families.

SYSTEM COORDINATION HIGHLIGHTS

In Pima County, 64 system partners responded to the FTF Coordination and Collaboration Survey providing insight on the system building efforts, level of collaboration, and the Council’s role in their county. Overall the findings from the survey suggest that partners consider the region to have a partially-coordinated early childhood system of care and the majority feel that all four areas (Family Support and Literacy, Children’s Health, Early Learning, and Professional Development) are effective in addressing the needs of children and their families in the region. Respondents felt that Family Support and Literacy and Professional Development were the most collaborative, followed by Early Learning and Children’s Health.

Below are key data trends that highlight the system coordination related needs, assets, and data-driven considerations for the FTF Pima North Region. The considerations provided below do not represent comprehensive approaches and methods for tackling the needs and assets in the region. Instead, the considerations represent possible approaches that early childhood system partners, including the FTF, could take to address needs and assets in the region, as conceptualized by the authors of this report.

Assets	Recommendations
About half of respondents (52.8%) feel the region’s early childhood system is partially-coordinated.	Identify more system leaders that can guide system partners and participants towards a more coordinated and collective network that will even more efficiently serve children and families.
Strong efforts to facilitate collaboration among partners in the region through regular meetings and communication.	Provide more cross-threading between Early Childhood areas to strengthen collaboration and coordination across the system.

Needs	Recommendations
Children’s Health was considered to be the least collaborative area, followed by Early Learning.	Identify successes from the Family Support and Professional Development collaboration efforts that can be applied to the other areas. Consider learning from other FTF regions that have strong collaborations to identify how they developed their system and apply them to Pima North as appropriate.

Conclusion

The FTF Pima North Region occupies the northeastern corner of Pima County and is located in the southeastern portion of Arizona. The Pima North Region is made up of a diverse mix of urban and rural communities in the central and northern portions of Pima County. The region has a strong collaborative system of providers that are dedicated to the well-being of the region’s youngest children and their families, yet it is difficult to overcome barriers like high poverty and limited access to food, transportation, early care and education, and healthcare services. First Things First is a great asset in the region as they play a large role in funding and supporting the area’s early childhood system.

The following tables combine the assets, needs, and considerations from the eight domains presented in this report. These key findings are intended to provide information to the FTF Pima North Regional Partnership Council and the community as a whole around the needs and assets of the region’s zero to five population and their families.

Assets

Assets	Considerations
Population Characteristics	
The percentage of children under age six identifying as Hispanic or Latino in the FTF Pima North Region is greater than the percentage of the total population 18 and over that identifies as Hispanic or Latino, both in the region and State. Furthermore, this population is expected to increase over the next several decades.	Support culturally appropriate services for families.
The population of children under the age of six is projected to grow at a modest and steady rate, allowing the region to foresee and prepare for the growing demands of their youngest residents.	Discuss tactics for planning ahead for the projected slow, but steady, growth of the under six population and the needs that accompany that growth.
Economic Circumstances	
The FTF Pima North Region has several programs, such as SNAP and WIC, aimed to support the availability of nutritious foods for children under six and their families.	Continue to promote community awareness of nutrition programs available to young children and their families.
Education	
The majority of adults in the region have completed high school, received a GED or pursued further education (89%).	Promote the benefits of completing a high school diploma.

Early Learning	
Quality First has been increasing the quality of child care programs in the region.	Increase parent awareness of the availability of preschool centers and homes that are part of the Quality First program.
Child Health	
Approximately 90% of children in the region are receiving immunizations.	Continue to promote healthy preventive behaviors like receiving immunizations.
Family Support and Literacy	
The majority of parents understand the importance of play and engage in activities with their child almost every day.	Continue to educate parents on the importance of play and engaging in developmentally stimulating activities with their children daily.
Parents in the region scored higher on child development questions than in the state.	Continue to educate parents on parents' impact on their child's development, especially starting at the prenatal stage.
There are a variety of home visitation programs offered in the region.	Continue to offer and promote a variety of home visitation programs to families in the region. Also discuss providing a transition from home visitation programs that serve 0-3 year olds to PreK programs that service 4-5 year olds.
Communication, Public Information and Awareness	
FTF utilizes integrated strategies to communicate the importance of making early childhood an issue Arizonans value.	Continue to utilize integrated strategies to highlight the importance of early childhood development and health.
FTF engages community members to take action on behalf of young children.	Continue to engage community members through the community engagement program.
System Coordination	
About half of respondents (52.8%) feel the region's early childhood system is partially-coordinated.	Identify more system leaders that can guide system partners and participants towards a more coordinated and collective network that will even more efficiently serve children and families.
Strong efforts to facilitate collaboration among partners in the region through regular meetings and communication.	Provide more cross-threading between Early Childhood areas to strengthen collaboration and coordination across the system.

Needs

Needs	Considerations
Population Characteristics	
About 40 percent of children 0-5 live in single-parent households. Compared to two parent households, these living arrangements present additional barriers and difficulties for the parties involved..	Promote supports and resources that can help subsidize child care and other expenses for single parents.
Economic Circumstances	
About 40 percent of children under six live in single-parent households, which earn substantially less money than dual parent households, and more than 25% of children 0-5 live in poverty.	Identify ways to support young children and connect families to other existing resources through FTF programming, such as preschool.
Over a quarter of children under eighteen in the county (25%) are food insecure and 27% live under the poverty level.	Further investigate food insecurity rates in the region to have a better understanding of how FTF can support young children who are food insecure.
Education	
The percentage of students in first, second or third grade missing less than ten days of school increased from 2014 to 2015.	Consider additional research to understand the factors that are causing missed school days.
Less than half of third graders are meeting proficiency requirements for English Language Arts and Math (43-44%) and less than half of preschool-aged children in the FTF Pima North Region are enrolled in early care and education (44%).	Increase awareness of early education programs to support learning and school readiness from an early age.
Early Learning	
Between 2013 and 2014, the number of child care subsidies provided in the region decreased from 4,269 to 4,093.	Voice support for the importance of subsidies in providing low income children access to early care and education.
Less than half of Early Childhood Education professionals in the state remain in their position for over five years.	Consider providing incentives for quality early childhood professionals to retain their skills in the early childhood field and reduce staff turnover. Also consider monitoring the impact of the min wage increase in AZ and how this will affect the early childhood workforce.
Childcare costs make up 9-13% of family	Consider advocating for the expansion of

incomes and between 26 -41% of single female family incomes.	child care scholarships for more families in the region. Consider prioritizing Quality First scholarships for single parent households.
Child Health	
Almost three fourths of parents (69%) are unaware of the impact they have on their child's development during the prenatal stage.	Continue to provide outreach and education regarding prenatal care, especially targeting first-time and teen mothers.
More than half of children (55%) were reported to have experienced tooth decay and 33% of children had untreated tooth decay.	Promote good oral health through other FTF programs, such as home visitation, and consider partnering with pediatricians to encourage oral health practices during well-child visits.
More than 50 percent of children screened through the Healthy Smiles Healthy Bodies survey in the FTF Pima North Region suffer from tooth decay.	Advocate for fluoridation in water in the communities within the FTF Pima North Region. Currently, Tucson Water does not add fluoride to the drinking water supply.
Family Support and Literacy	
In Pima County there were more than 356 substantiated cases of abuse or neglect in FY 2014-2015 and there is only one domestic violence shelter.	Support programs that help young families or children that have been exposed to violence.
Only 31% of parents in the FTF Pima North Region understand that they can significantly impact their child's brain development in the prenatal stage and 40% of parents understand that an infant or young child can really take in and react to the world around them right from birth understand that an infant or young child can really take in and react to the world around them right from birth	Expand messaging and parent education on the importance of parent engagement and involvement starting prenatally.
System Coordination	
Children's Health was considered to be the least collaborative area, followed by Early Learning.	Identify successes from the Family Support and Professional Development collaboration efforts that can be applied to the other areas. Consider learning from other FTF regions that have strong collaborations to identify how they developed their system and apply them to Pima North as appropriate.

Subregional Fact Boxes

The following pages include the subregional fact boxes for eight subregions of the FTF Pima North Region. The subregions are grouped by zip code as follows:

1. Rural Northwest: 85653, 85654, 85743
2. Marana: 85658
3. Urban Northwest: 85704, 85741, 85742
4. Catalina Foothills: 85718
5. Catalina/Oracle Junction: 85739
6. Central East: 85711, 85712, 85716
7. Davis Monthan: 85707, 85708
8. Downtown UofA: 85701, 85719, 85724
9. Mount Lemmon: 85619
10. Oro Valley: 85737, 85755
11. South Tucson: 85713, 85714, 85726
12. Southeast: 85710, 85730, 85748
13. Flowing Wells: 85705
14. Tanque Verde-Sabino Canyon: 85715, 85749, 85750
15. West Gates Pass: 85745

Rural Northwest

* Data suppressed; Non-zero count less than 6

**As of 2014, the new version of the Birth Certificate has introduced major changes in the way prenatal care by trimester is assessed. Month when the prenatal care began is no longer directly reported but rather calculated using the date of last menstrual period and the date of the first prenatal care visit. Due to this structural change prenatal care is not comparable between 2013 and 2014 onward

**As of 2014, the new version of the Birth Certificate has introduced major changes in the way prenatal care by trimester is assessed. Month when the prenatal care began is no longer directly reported but rather calculated using the date of last menstrual period and the date of the first prenatal care visit. Due to this structural change prenatal care is not comparable between 2013 and 2014 onward

**As of 2014, the new version of the Birth Certificate has introduced major changes in the way prenatal care by trimester is assessed. Month when the prenatal care began is no longer directly reported but rather calculated using the date of last menstrual period and the date of the first prenatal care visit. Due to this structural change prenatal care is not comparable between 2013 and 2014 onward
